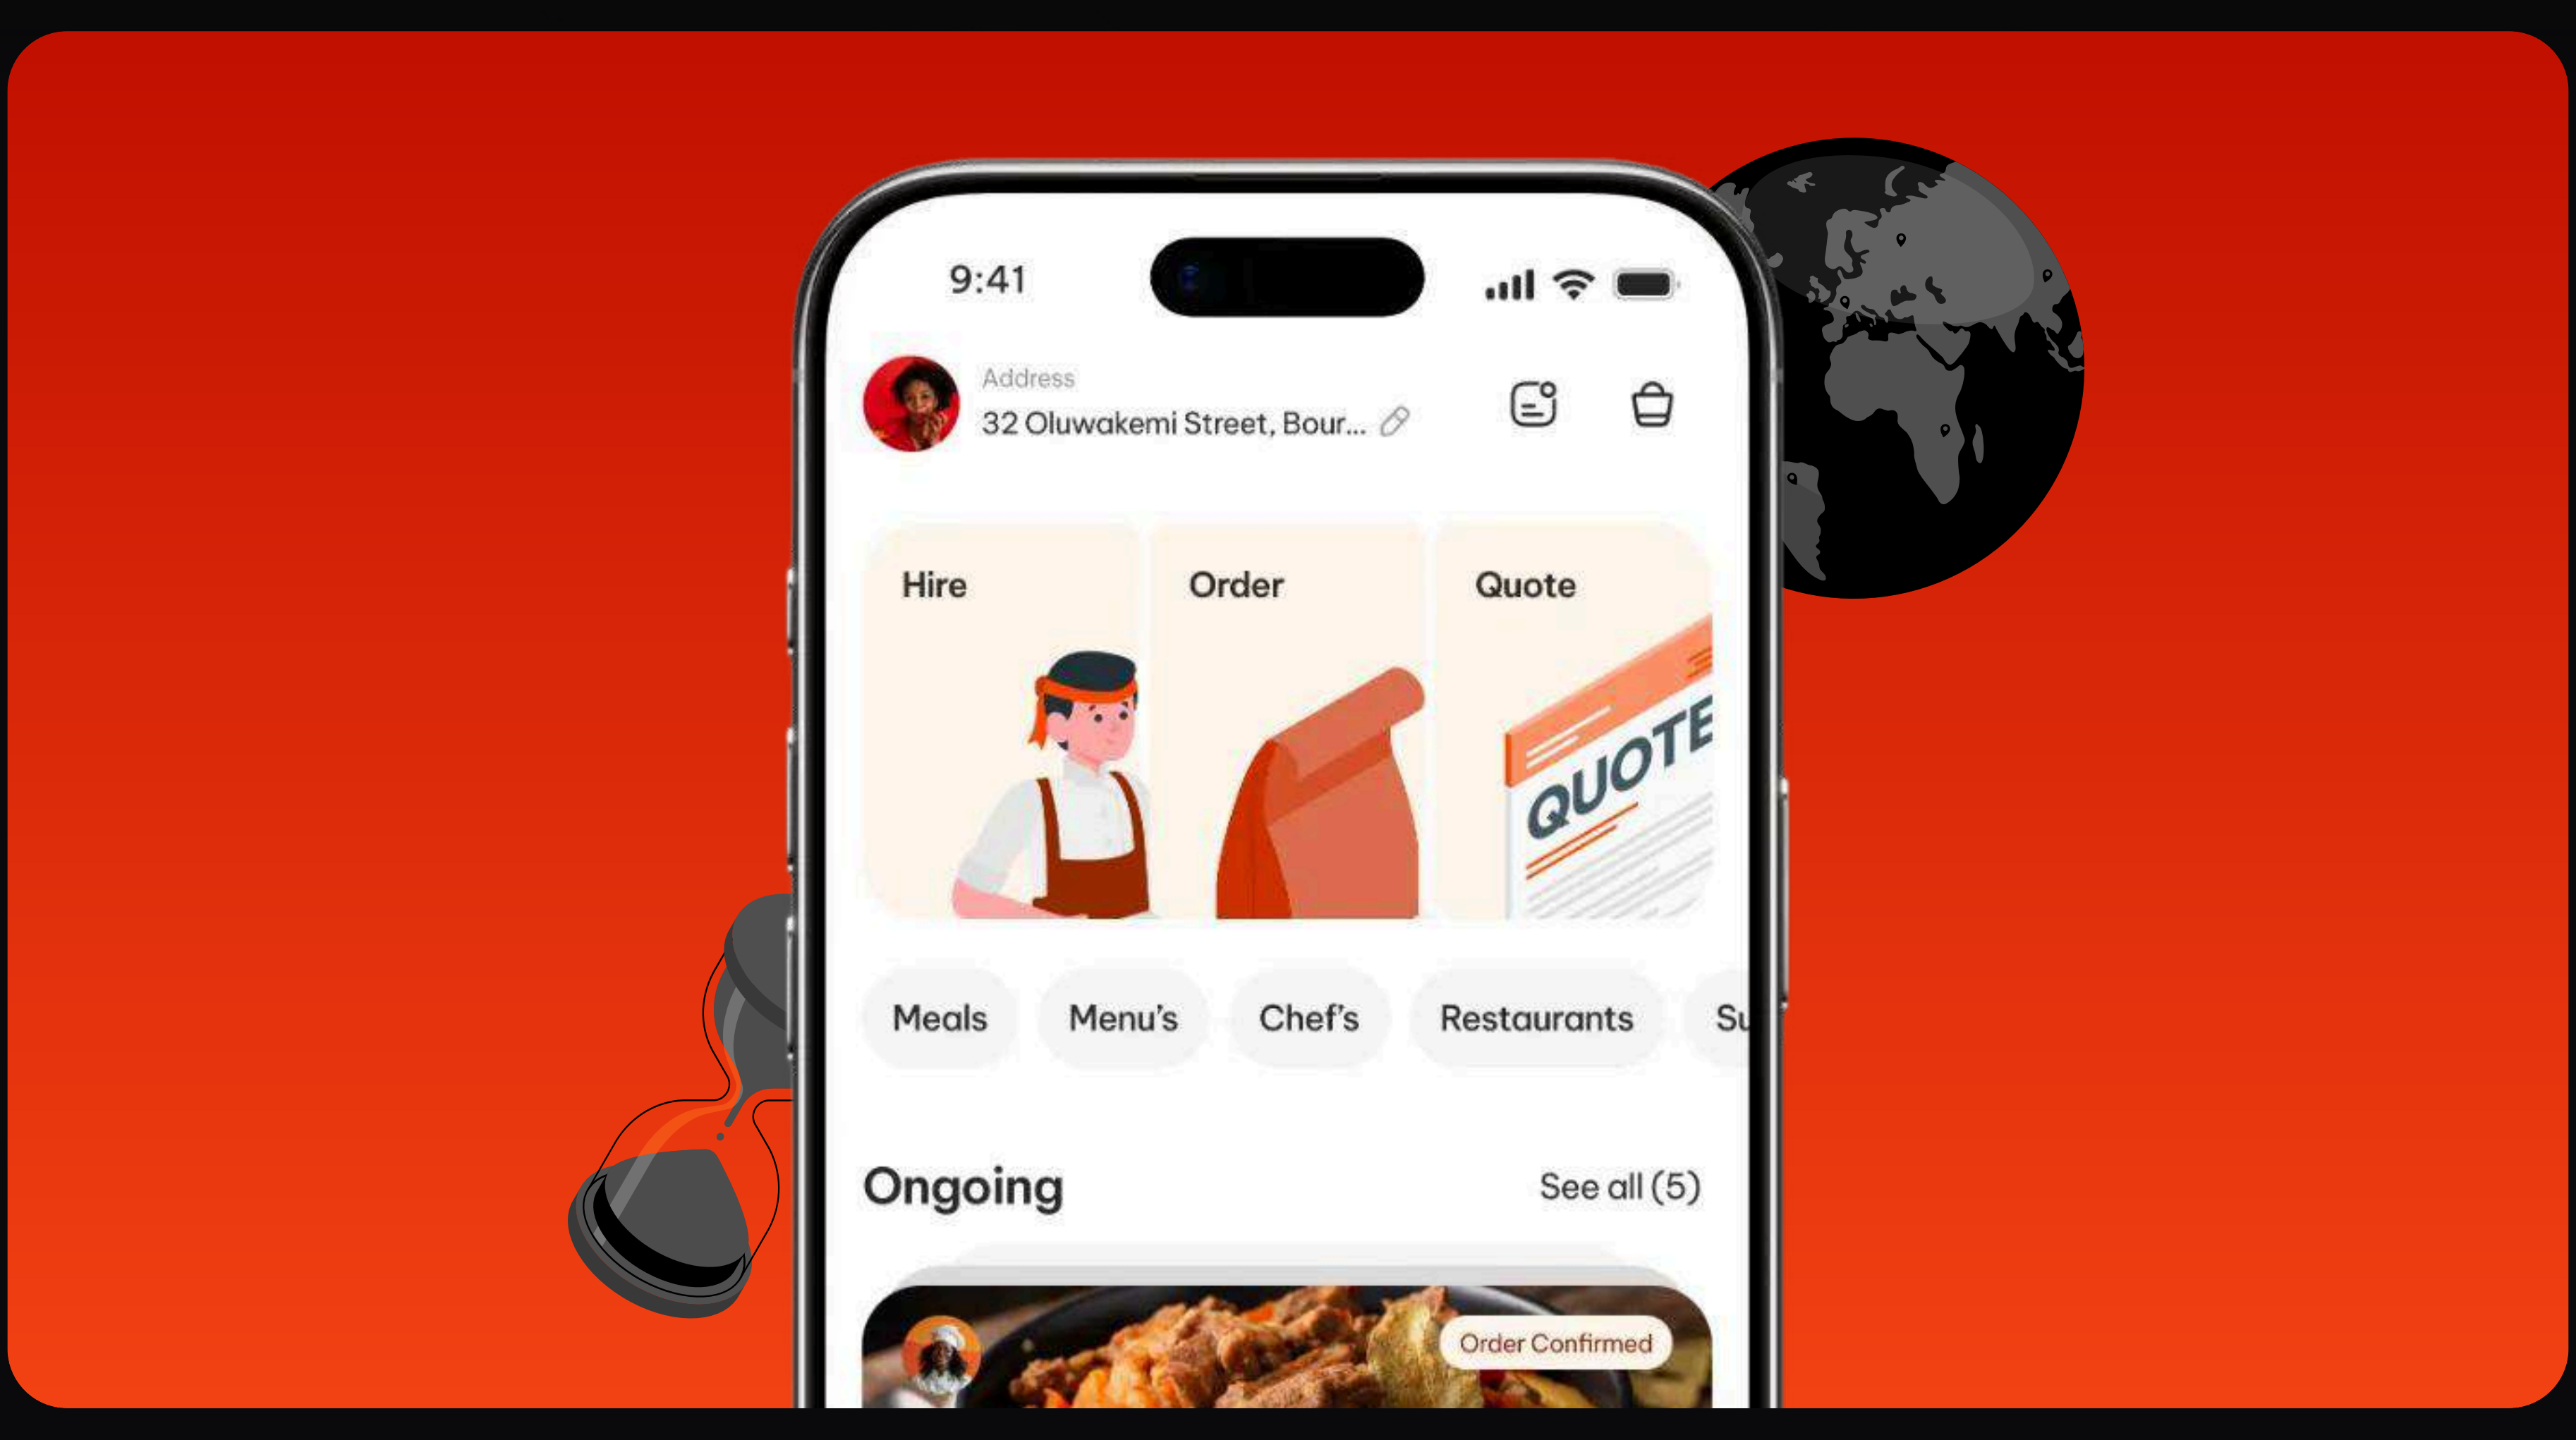
Chef4me User

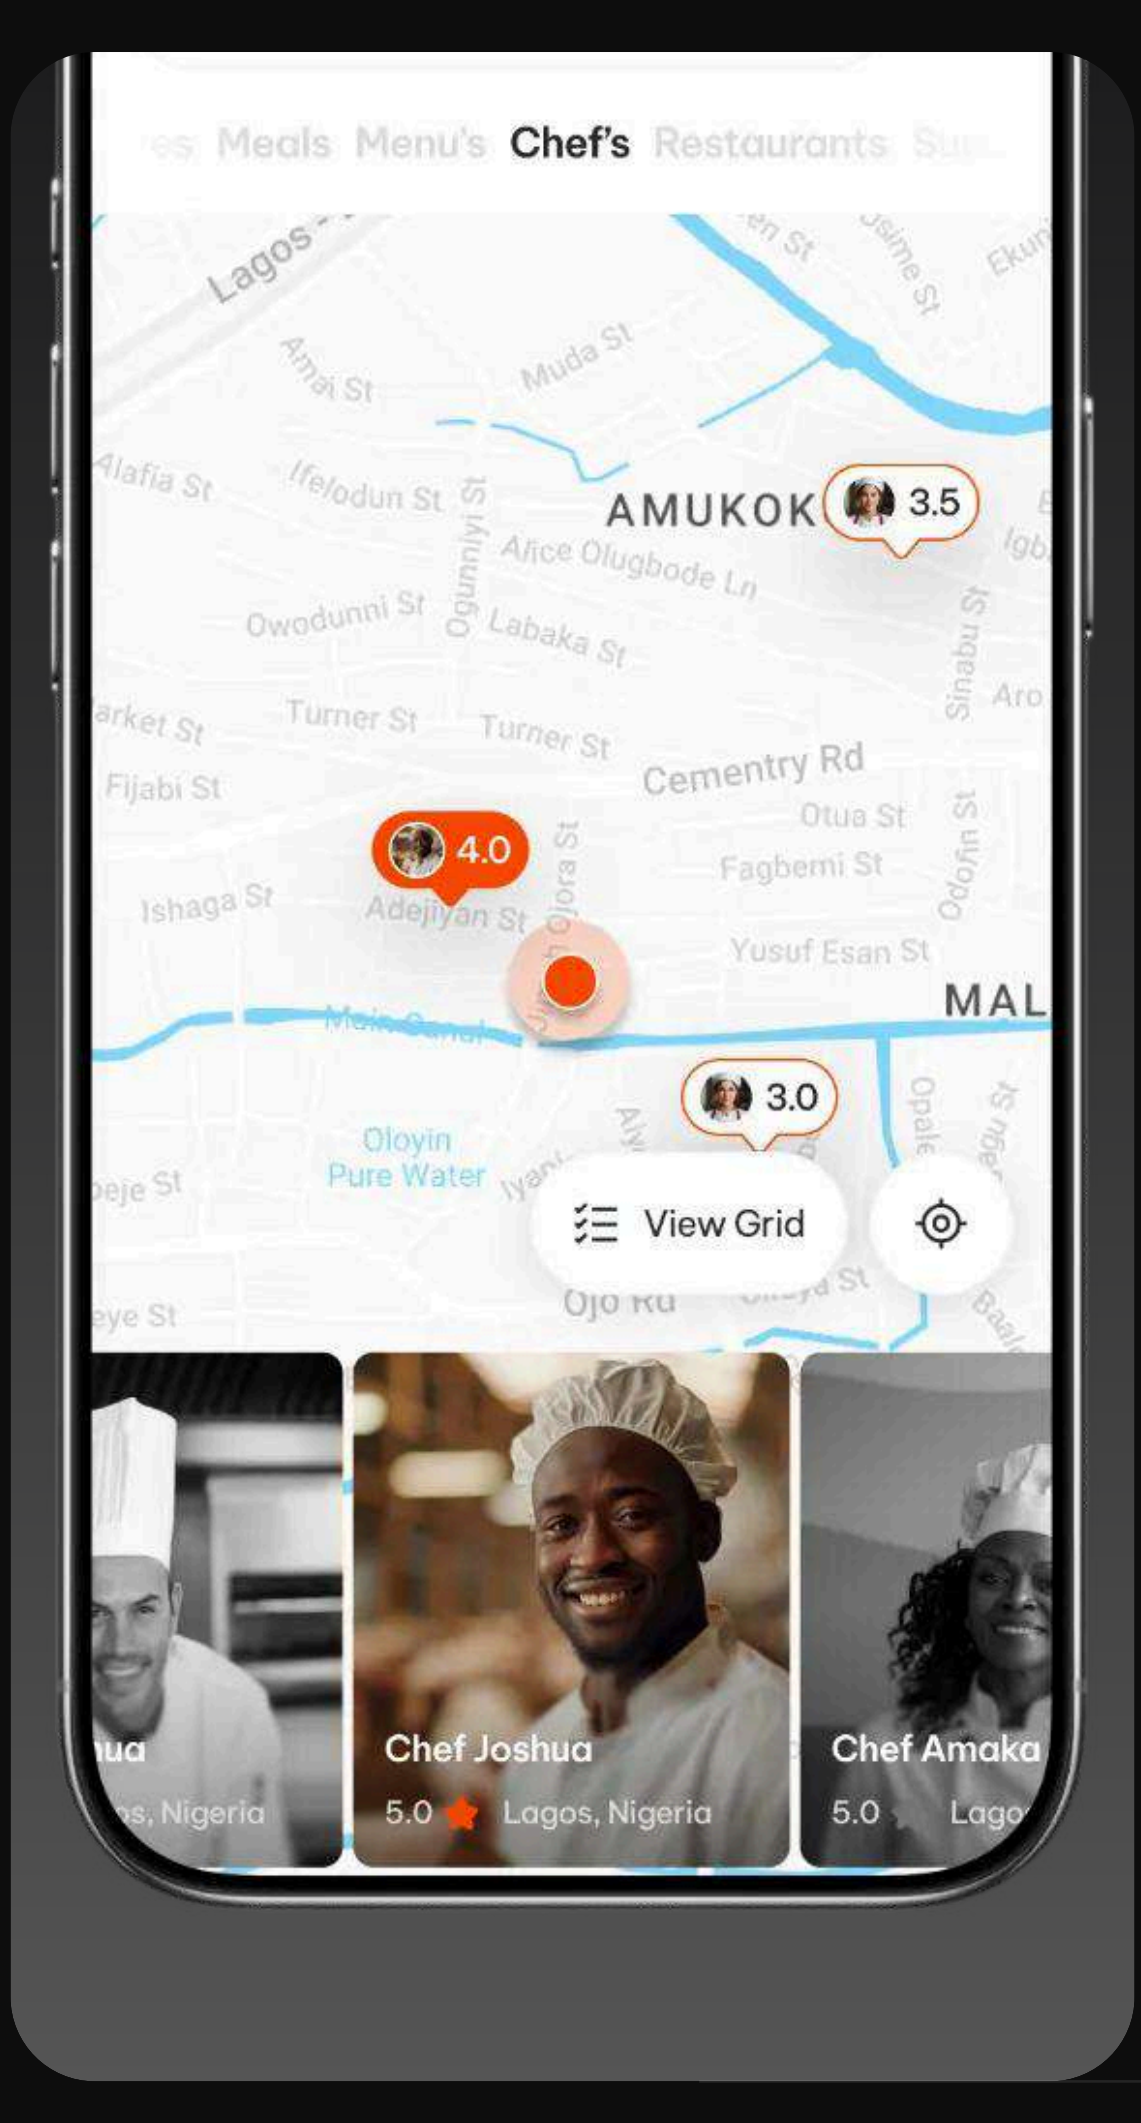
Democratizing access to private culinary talent through a flexible logistics-first platform.

UI &UX | Mobile App

Client	Chef4me ↗
Industry	Food
Year	2025

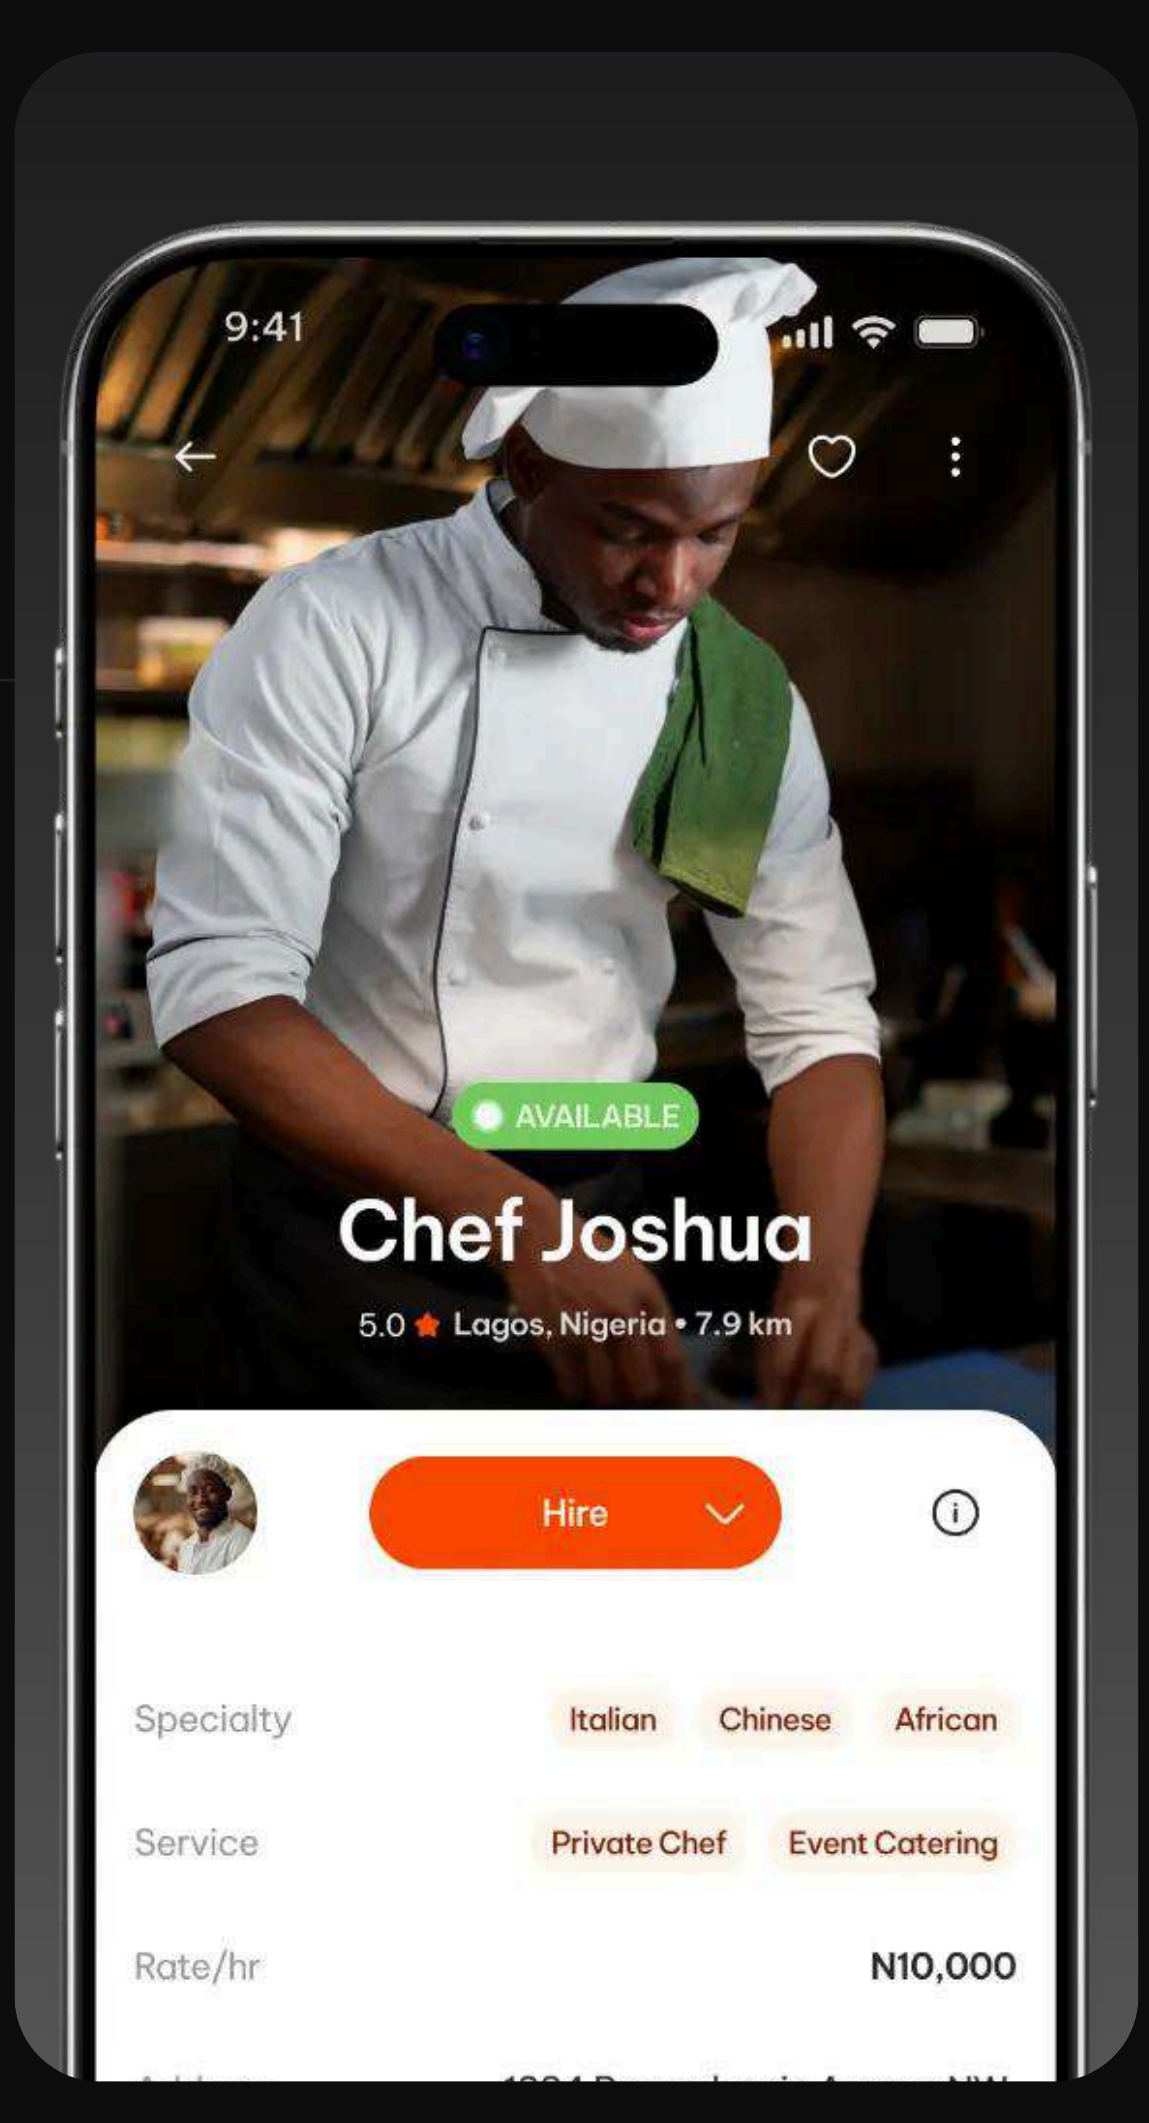


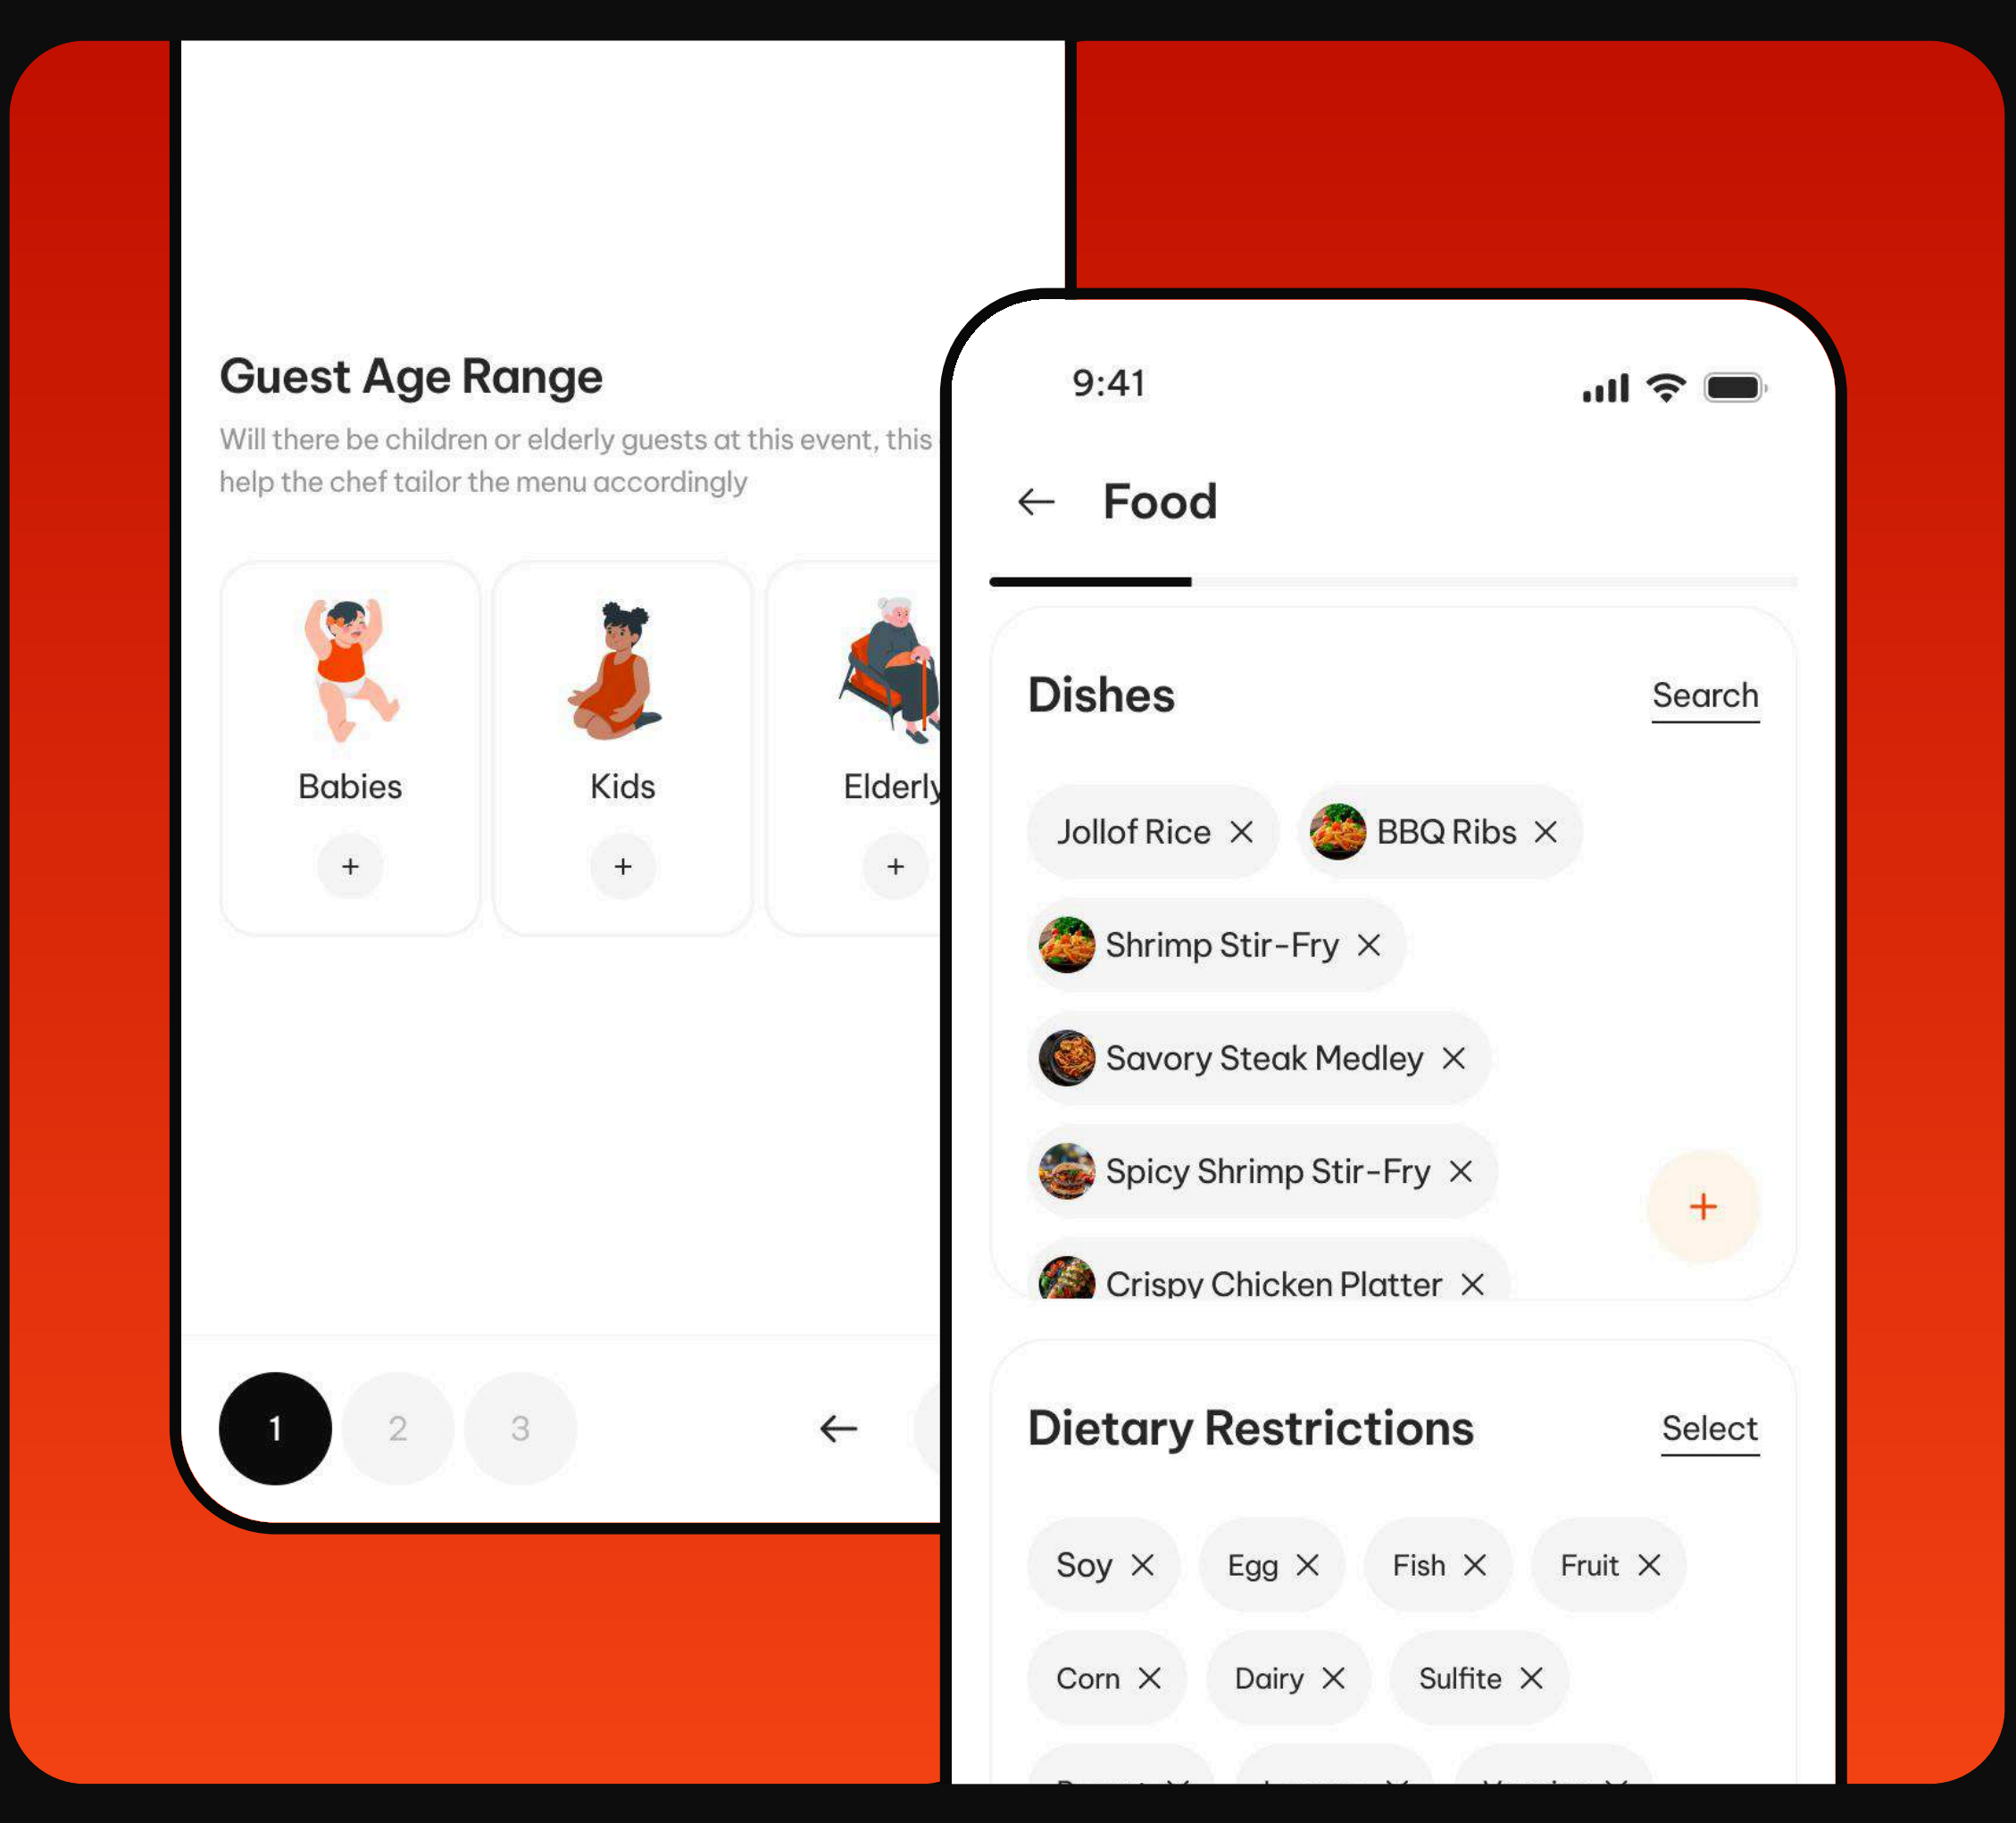
Finding a private chef or ordering custom, chef-prepared meals is traditionally a high-friction process involving fragmented communication and unclear pricing. The Chef4me platform needed a user-facing app that could bridge the gap between hungry users and culinary professionals, handling complex logistics like custom quotes, multi-day hirings, and varied delivery methods.



Transparency
I prioritized verified reviews, visible ratings, and a clear "About" section to humanize the chefs.

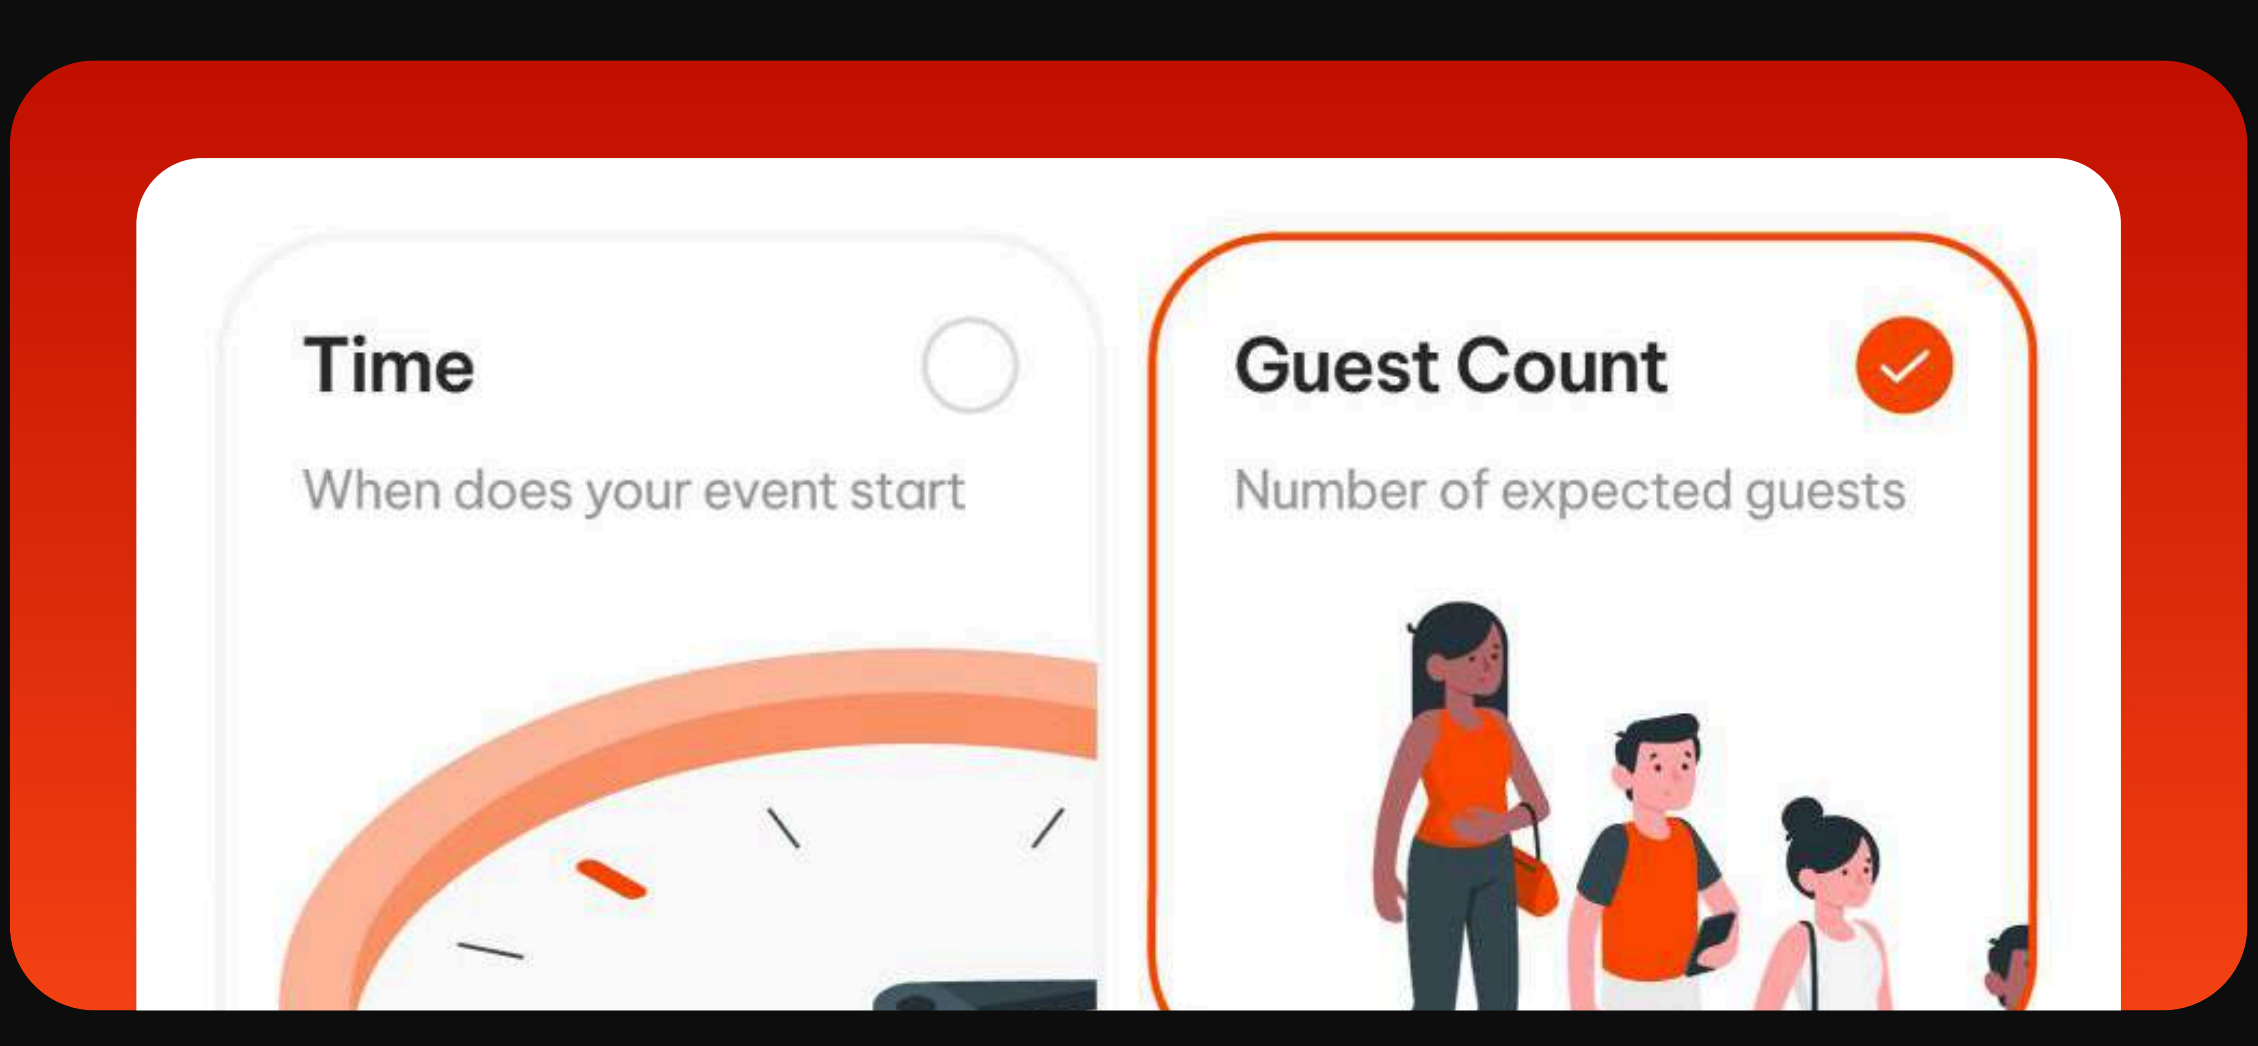
Designing for Trust
Users are inviting strangers into their homes or trusting them with their food. To bridge this "trust gap," I designed the Chef Profile to function as a comprehensive storefront.

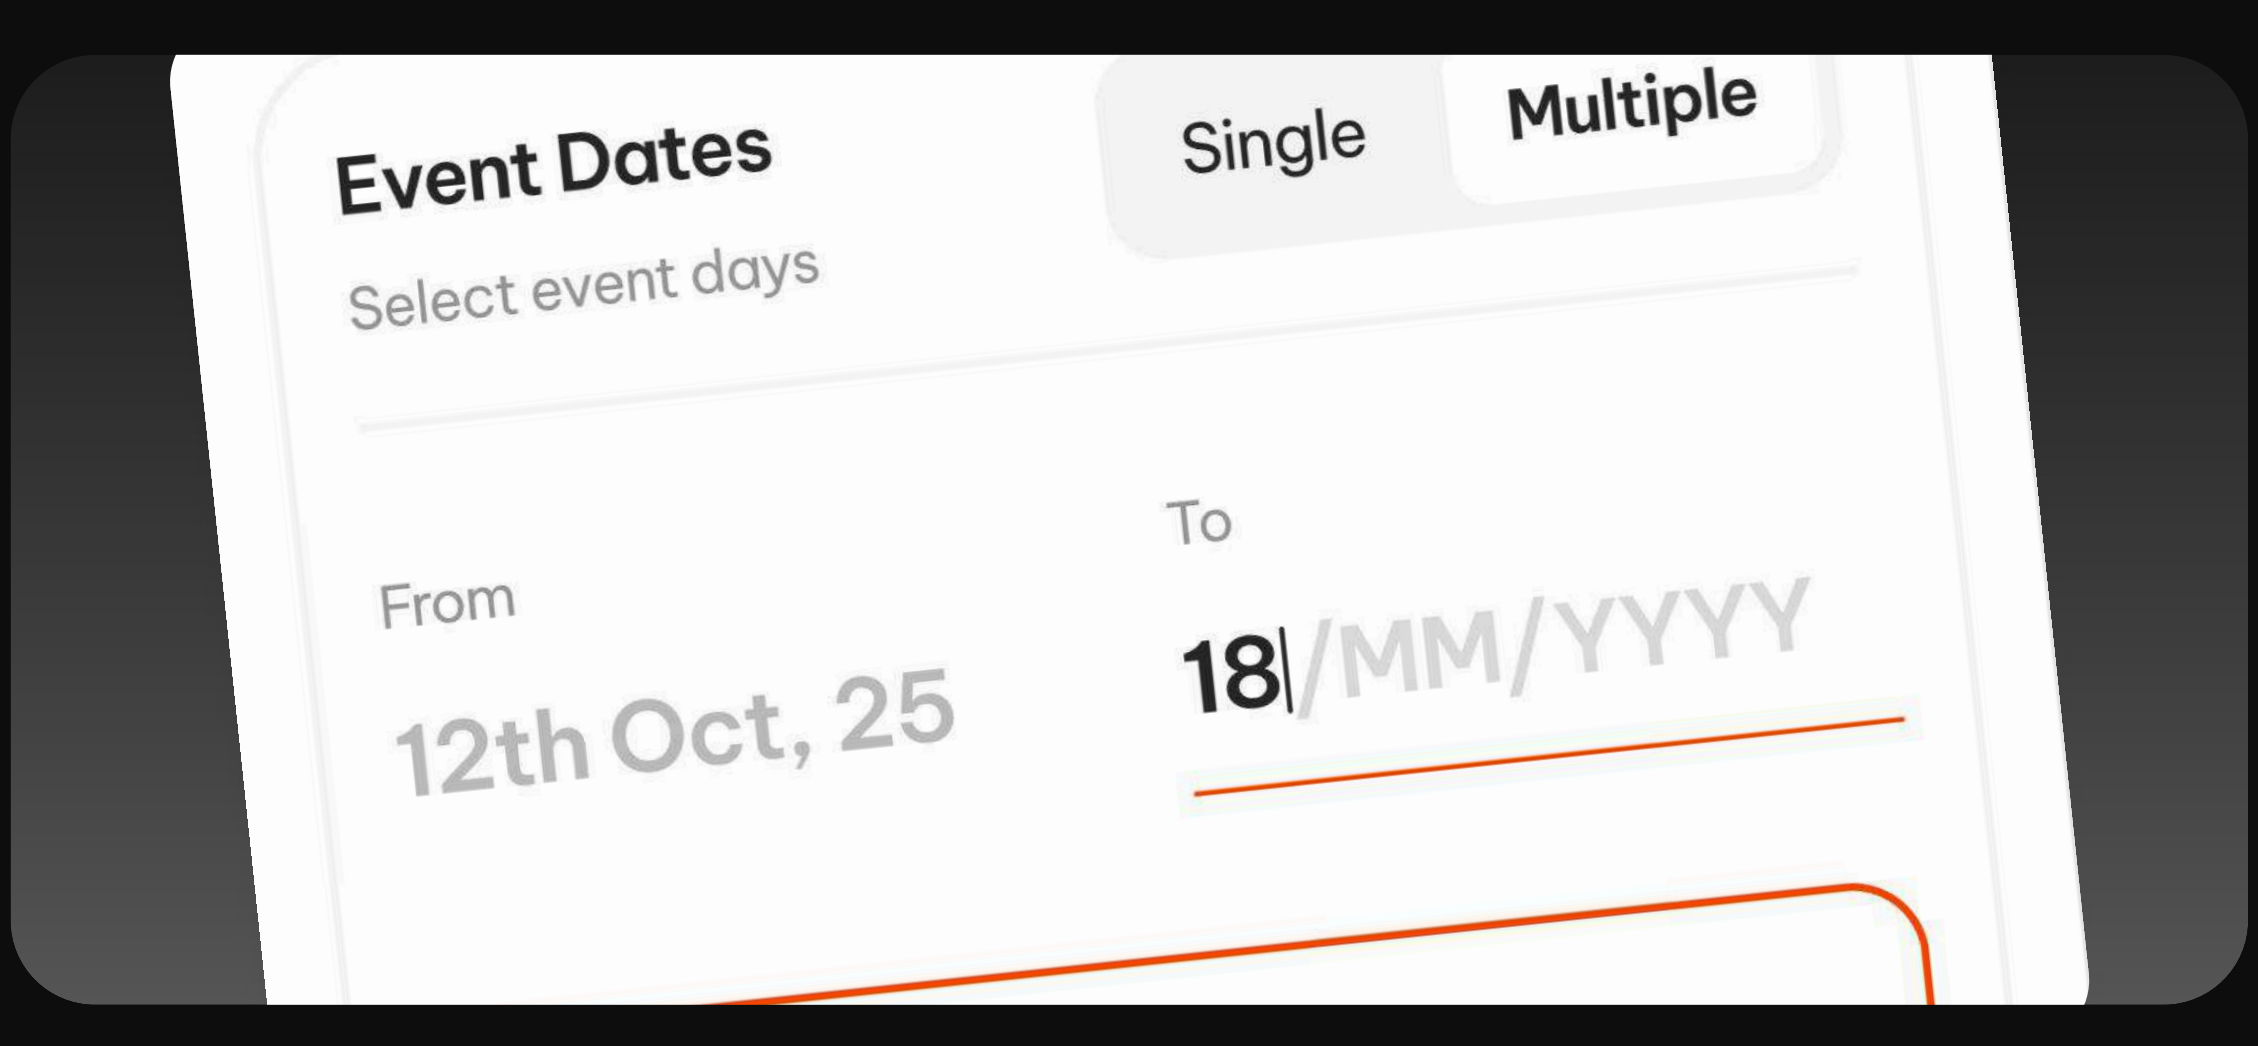




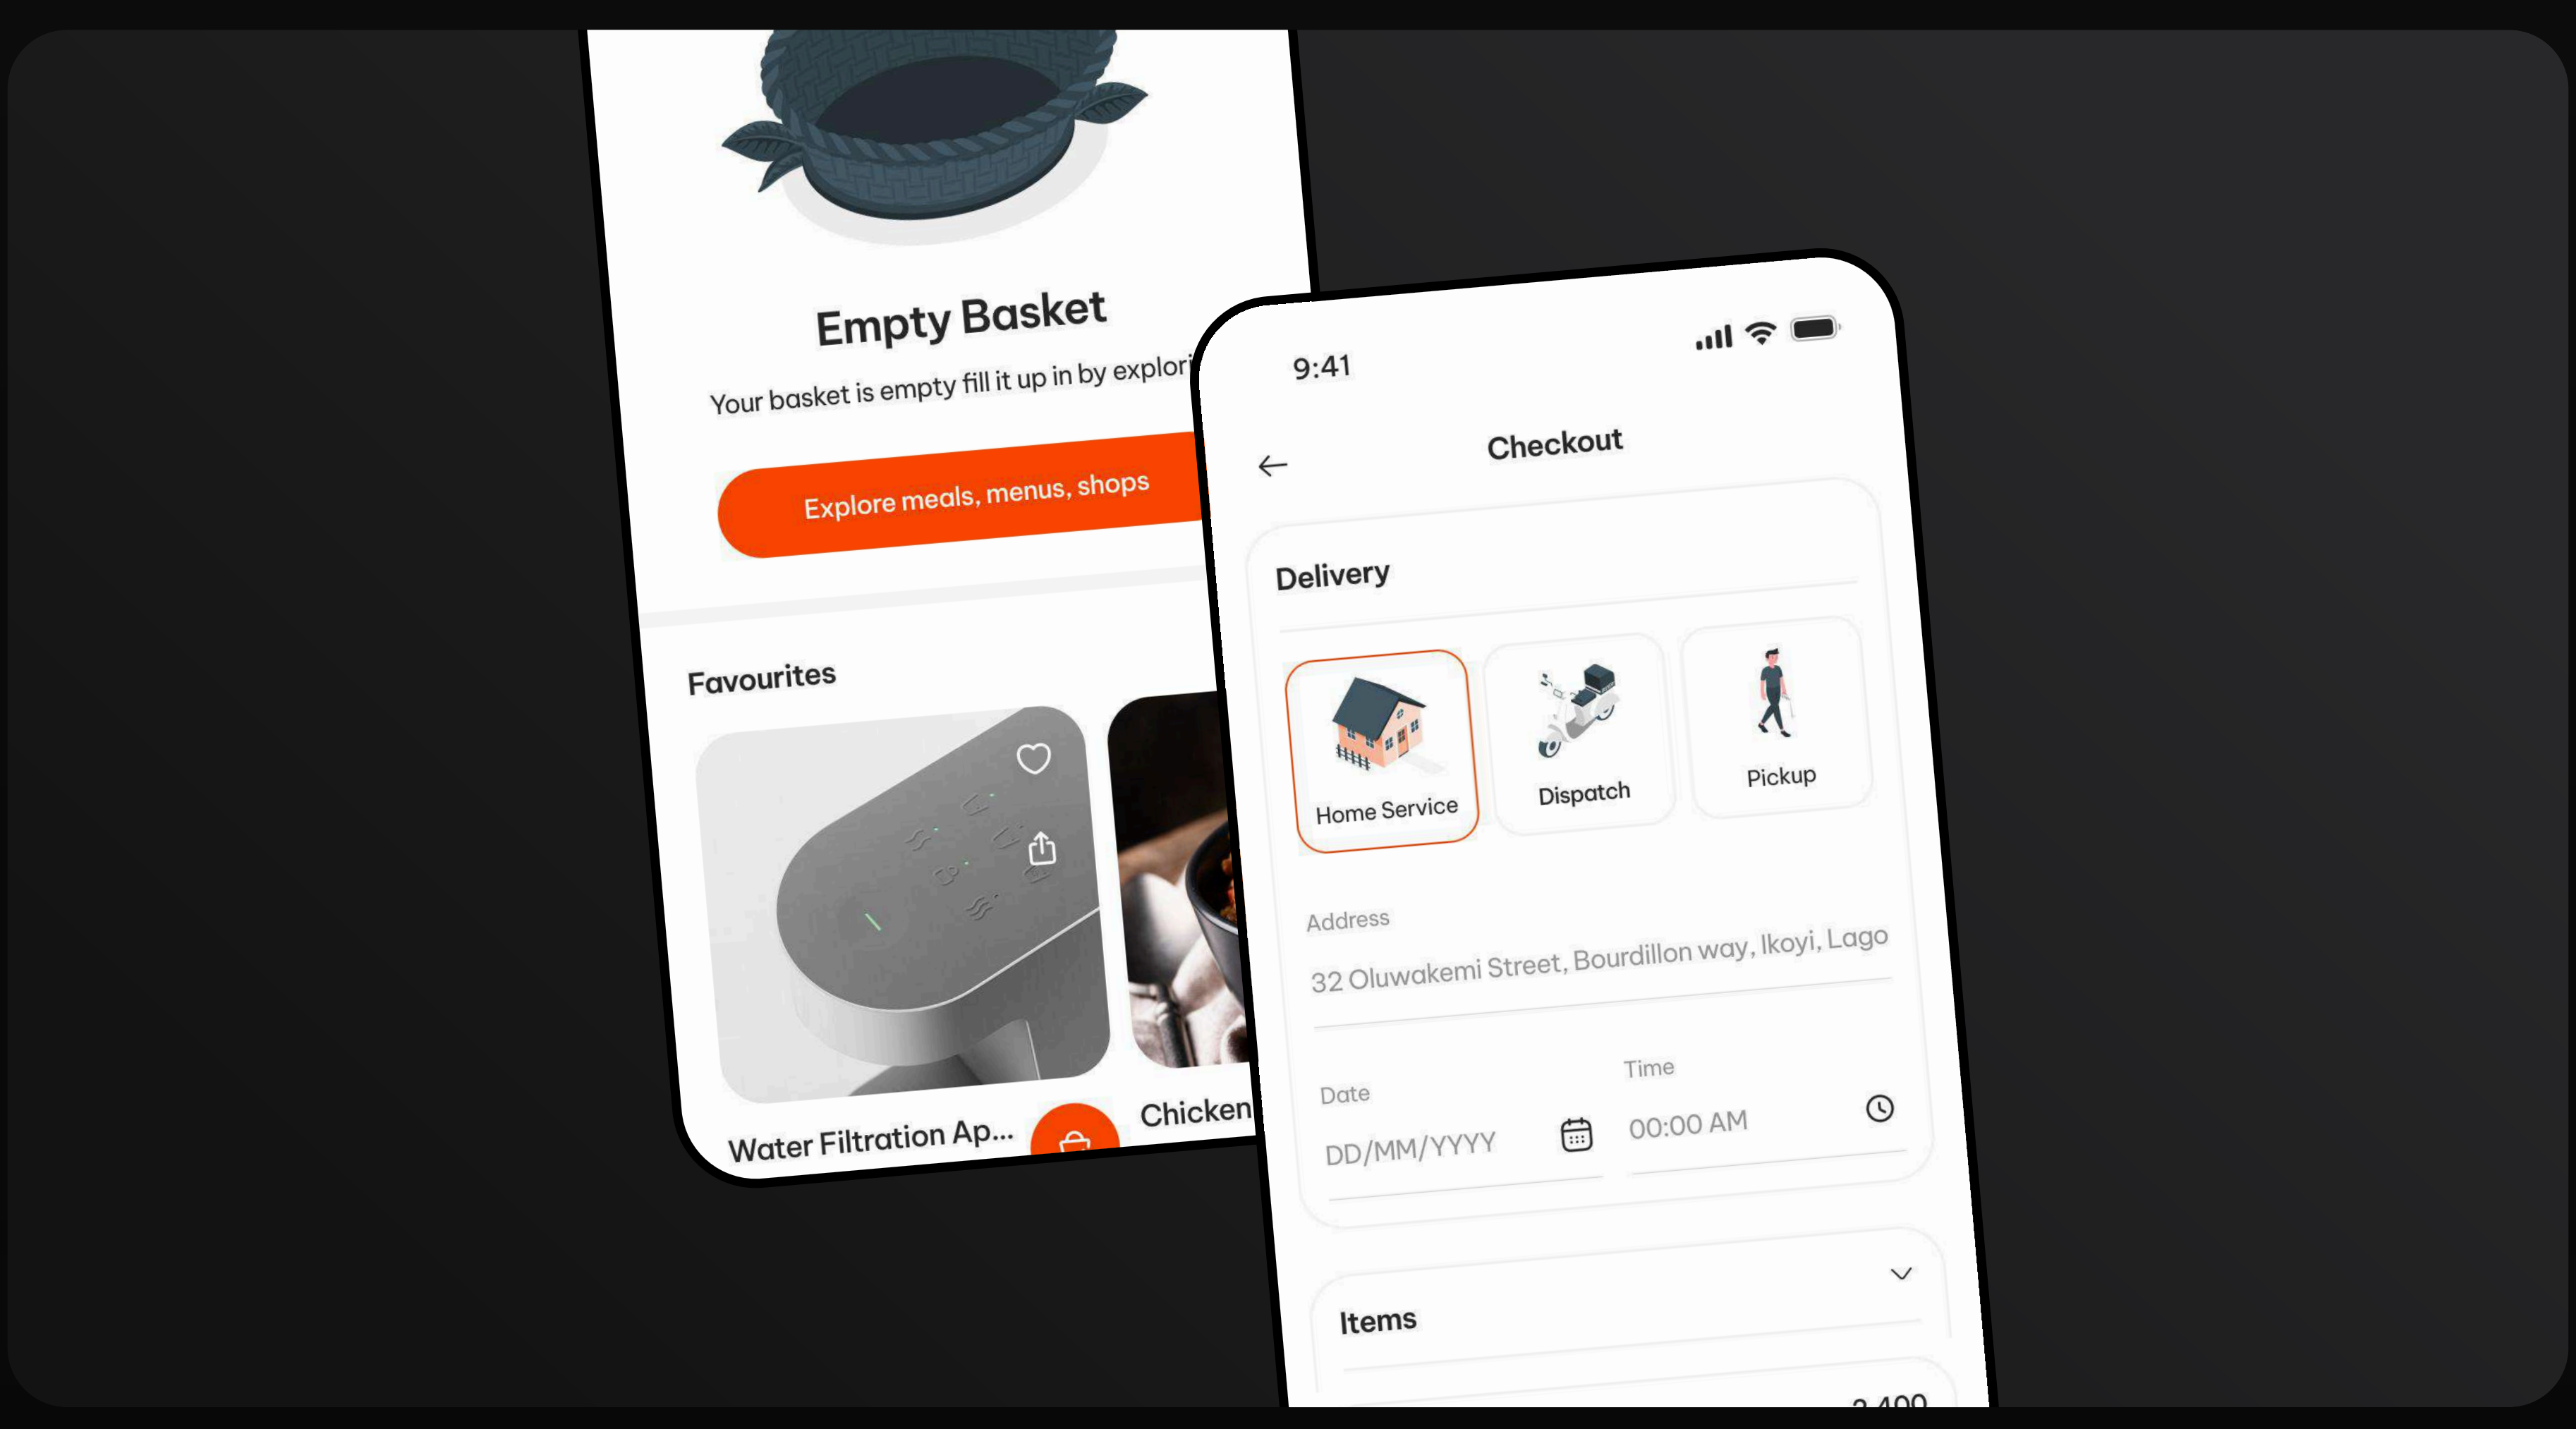
Custom orders require detailed inputs. To prevent cognitive overload, I utilized a "Wizard" stepper pattern for the Request Quote feature. By breaking the task into **Event Details** followed by **Food Preferences**, I reduced the perceived effort of the form, encouraging higher completion rates

Hiring a chef isn't a "one-size-fits-all" action. I created distinct logic paths for different user needs





Single-day hires focus on date, time, and guests. Multi-day hires need weekly scheduling with relevant data.



The final design successfully consolidated three distinct user behaviors—hiring, ordering, and requesting quotes—into a single, cohesive application.

Achieving key milestones: streamlined logistics by separating "Dispatch" and "Pickup" workflows, reducing user error during checkout; enhanced flexibility with a custom quoting system, enabling chefs to monetize unique services beyond standard menus; and systematic scalability through a modular design system, facilitating rapid future feature expansion.
