Chef4me Chef

A Platform built to empowers chefs to manage orders, update menus, track earnings, and handle their kitchen logistics — all from one place

UI & UX · Web App

Client	Chef4me
Industry	Food
Year	2025

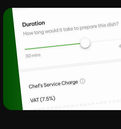

The chef web app was created to make the Chef4me platform more accessible and flexible for chefs who prefer managing their work from a larger screen. Whether they're at home, in the kitchen, or at an event, this version of the app gives chefs the tools they need to stay organized and responsive — from receiving meal orders to updating their food gallery, handling payments, and engaging with clients.
The experience was built with usability, clarity, and speed in mind — ensuring that even non-tech-savvy chefs can navigate the system with ease.

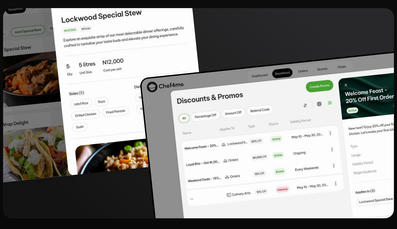

The goal was to **create an approachable**, not **overwhelming management system for** chefs

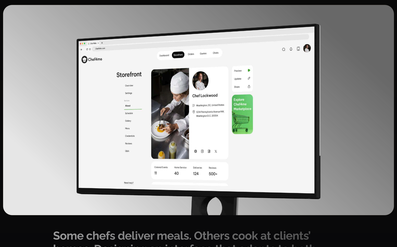

Focus was on a **Clean, Open, strain-free, accessible, approachable, modern interface and experience**

The question — what is the fastest approach to chefs managing business whilst cooking deliciousness?

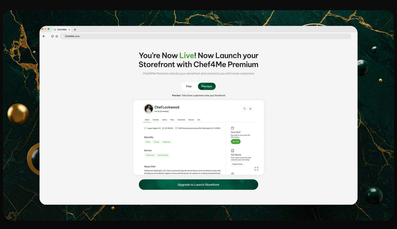

That question shaped **everything. From prioritizing orders and earnings to making menu updates intuitive, every feature was driven by actual use cases and everyday chef behavior.**

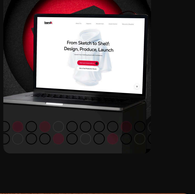

Some chefs deliver meals. Others cook at clients' homes. Designing an interface that adapts to both cases, without clutter or confusion, was key. We used conditional content blocks and progressive disclosure to keep the interface clean.

Chef4Me Premium was more than just a feature — it was a mindset shift. We had to design a smooth and exciting way for chefs to upgrade their experience, unlocking tools like a personalized storefront, business assets, and even a custom URL. The challenge? Making it feel valuable, not complex. So every screen was crafted to spark curiosity, build trust, and show chefs exactly how Premium could take their craft to the next level.
