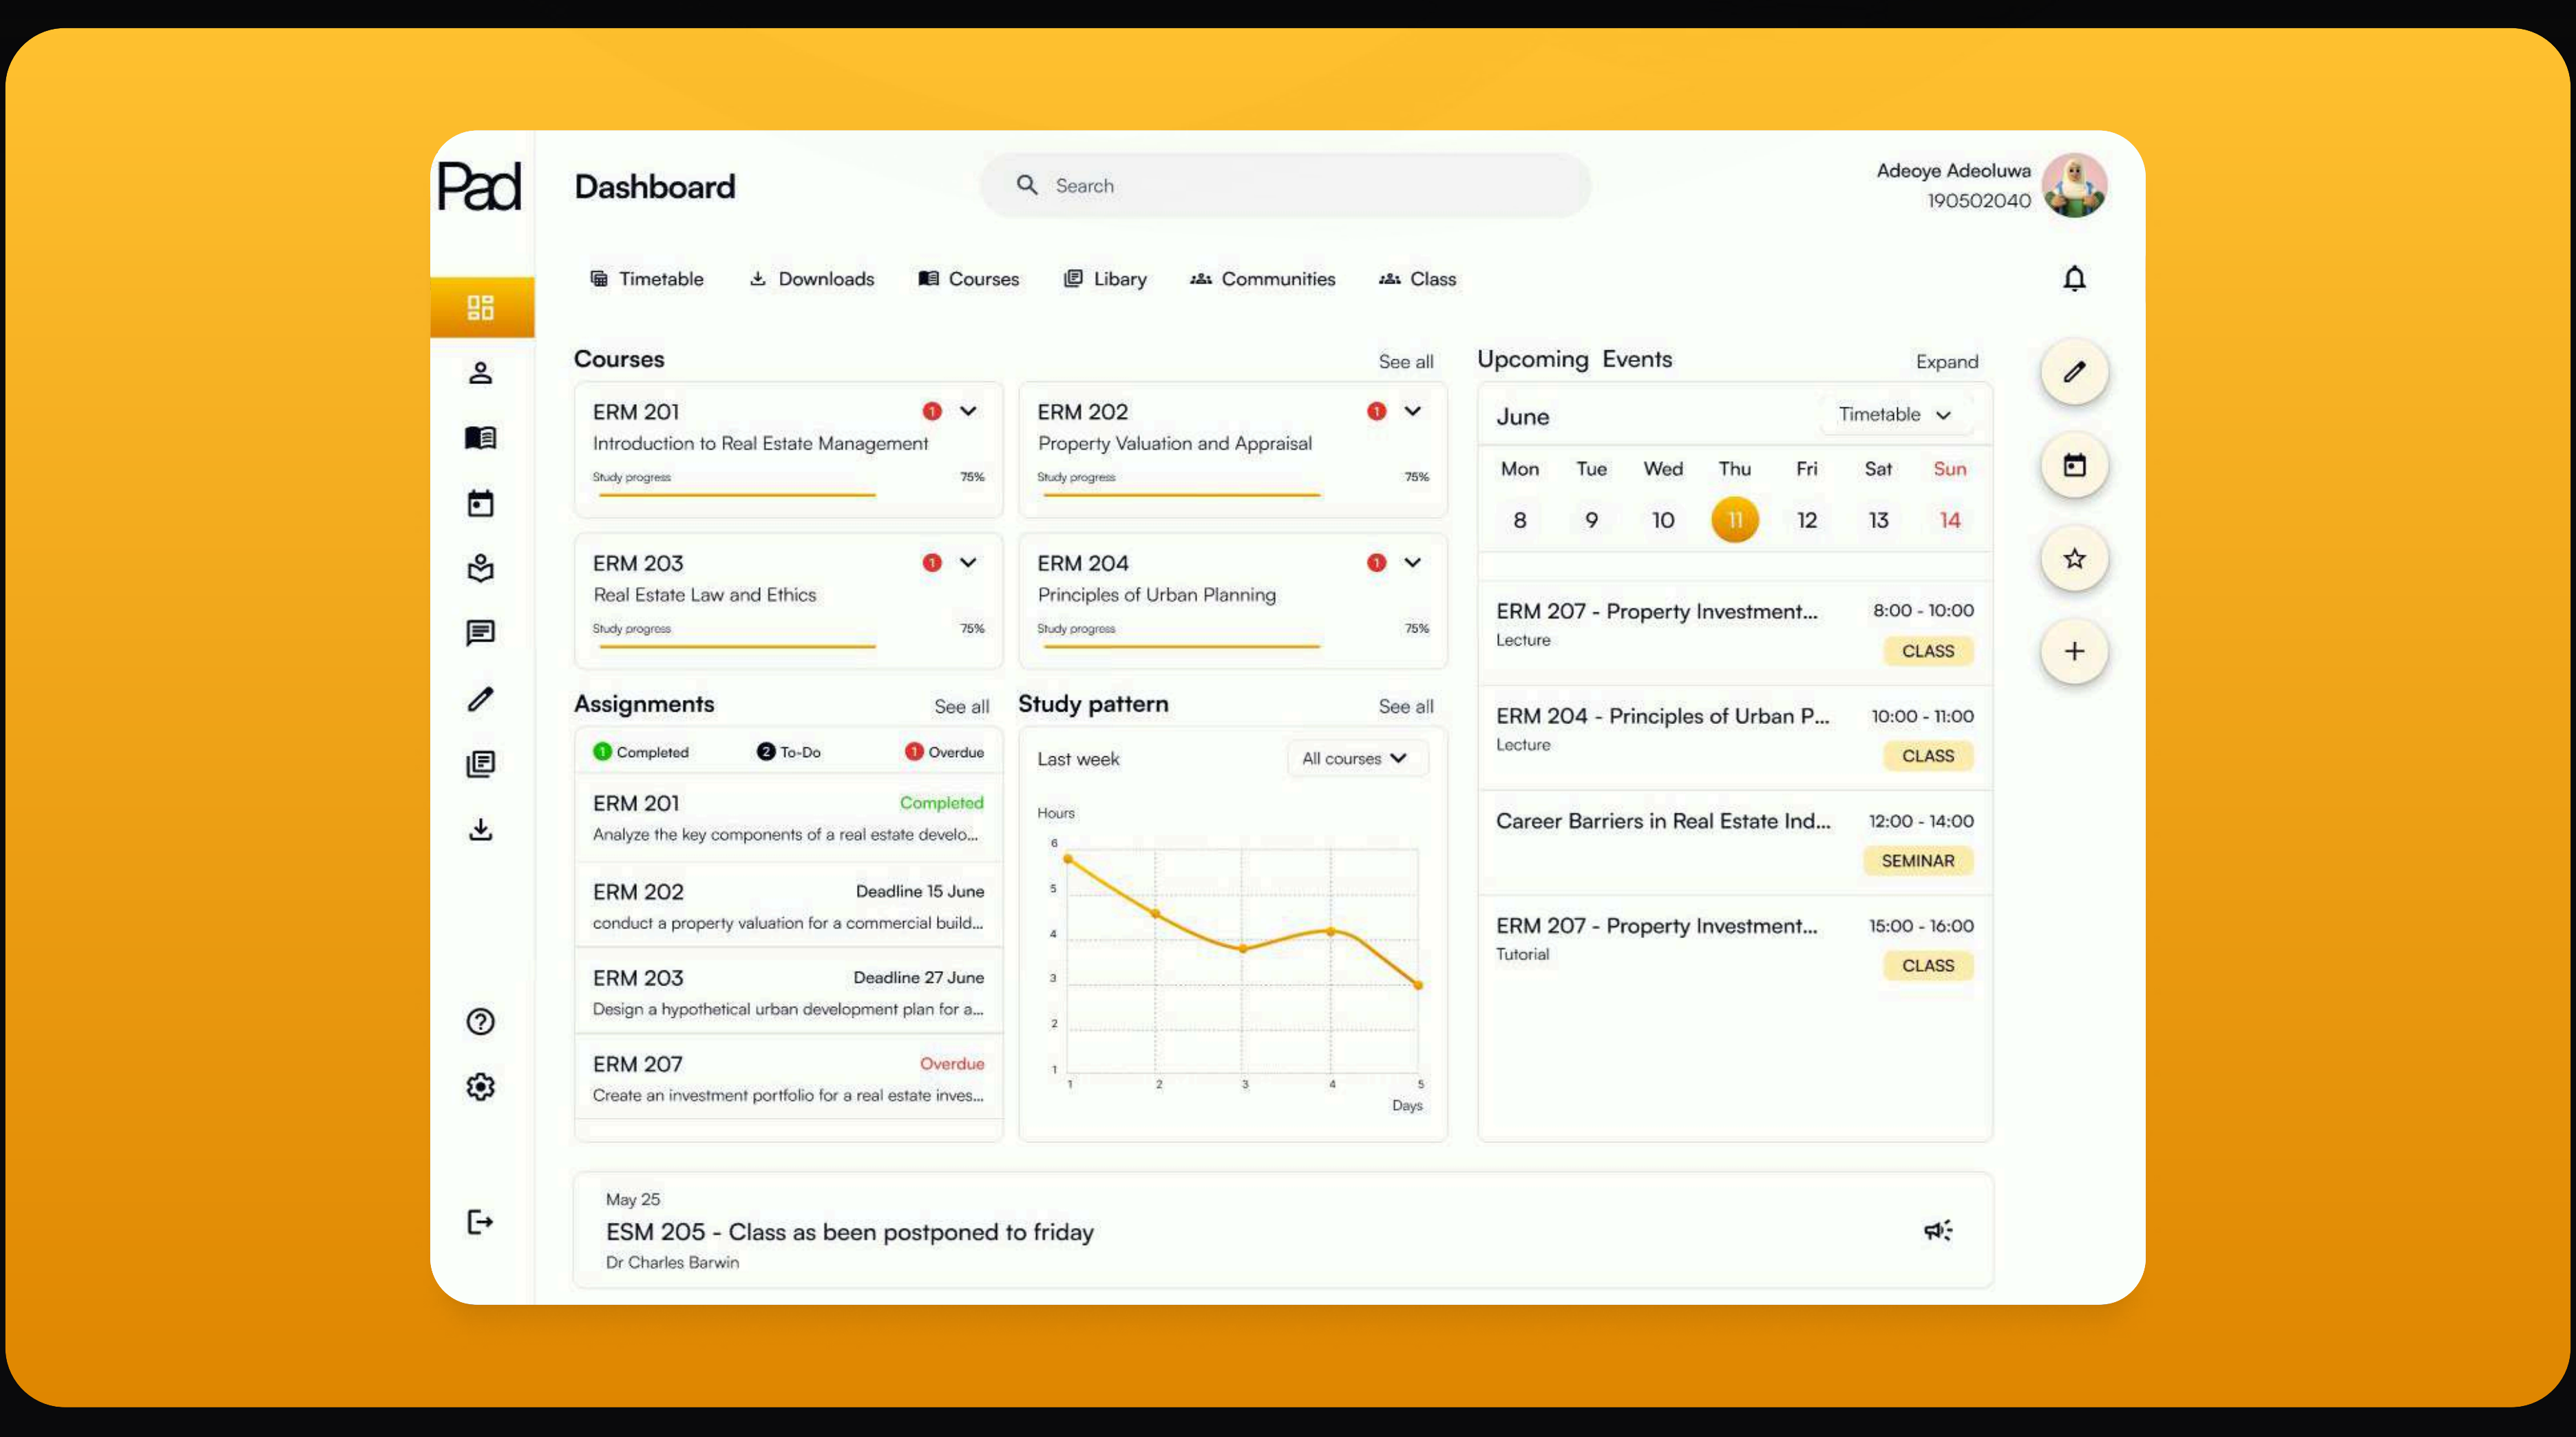
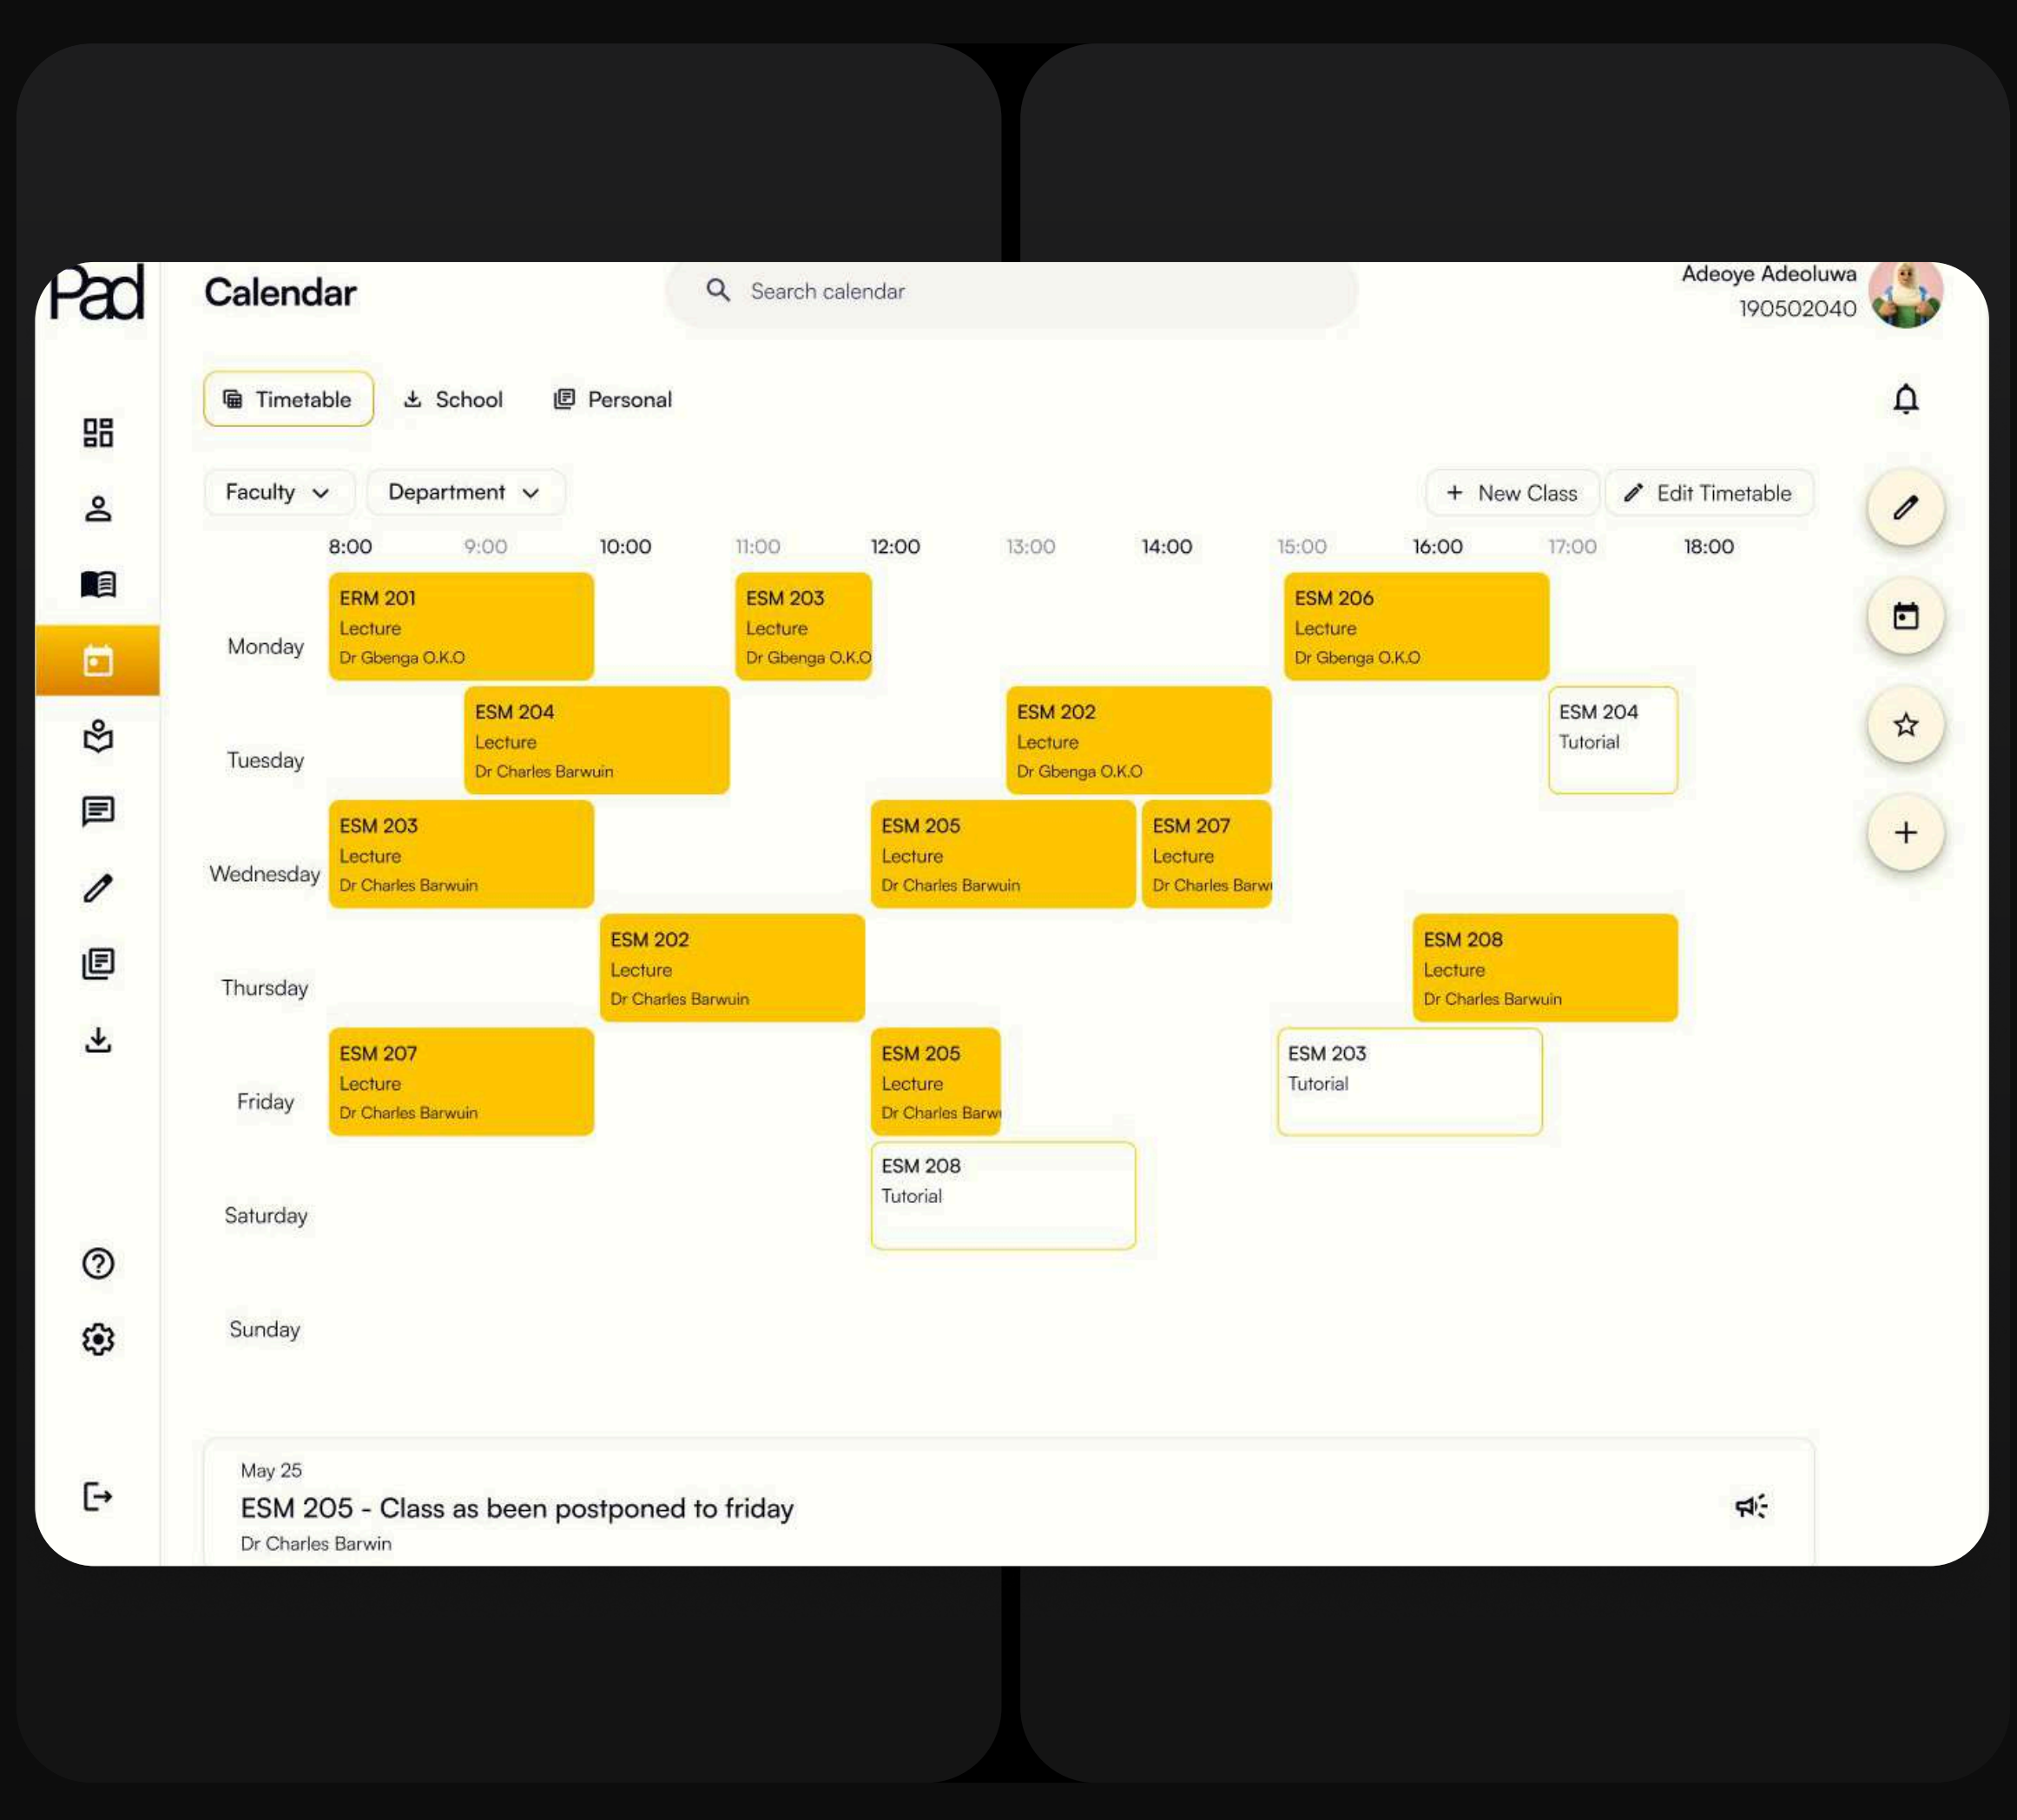
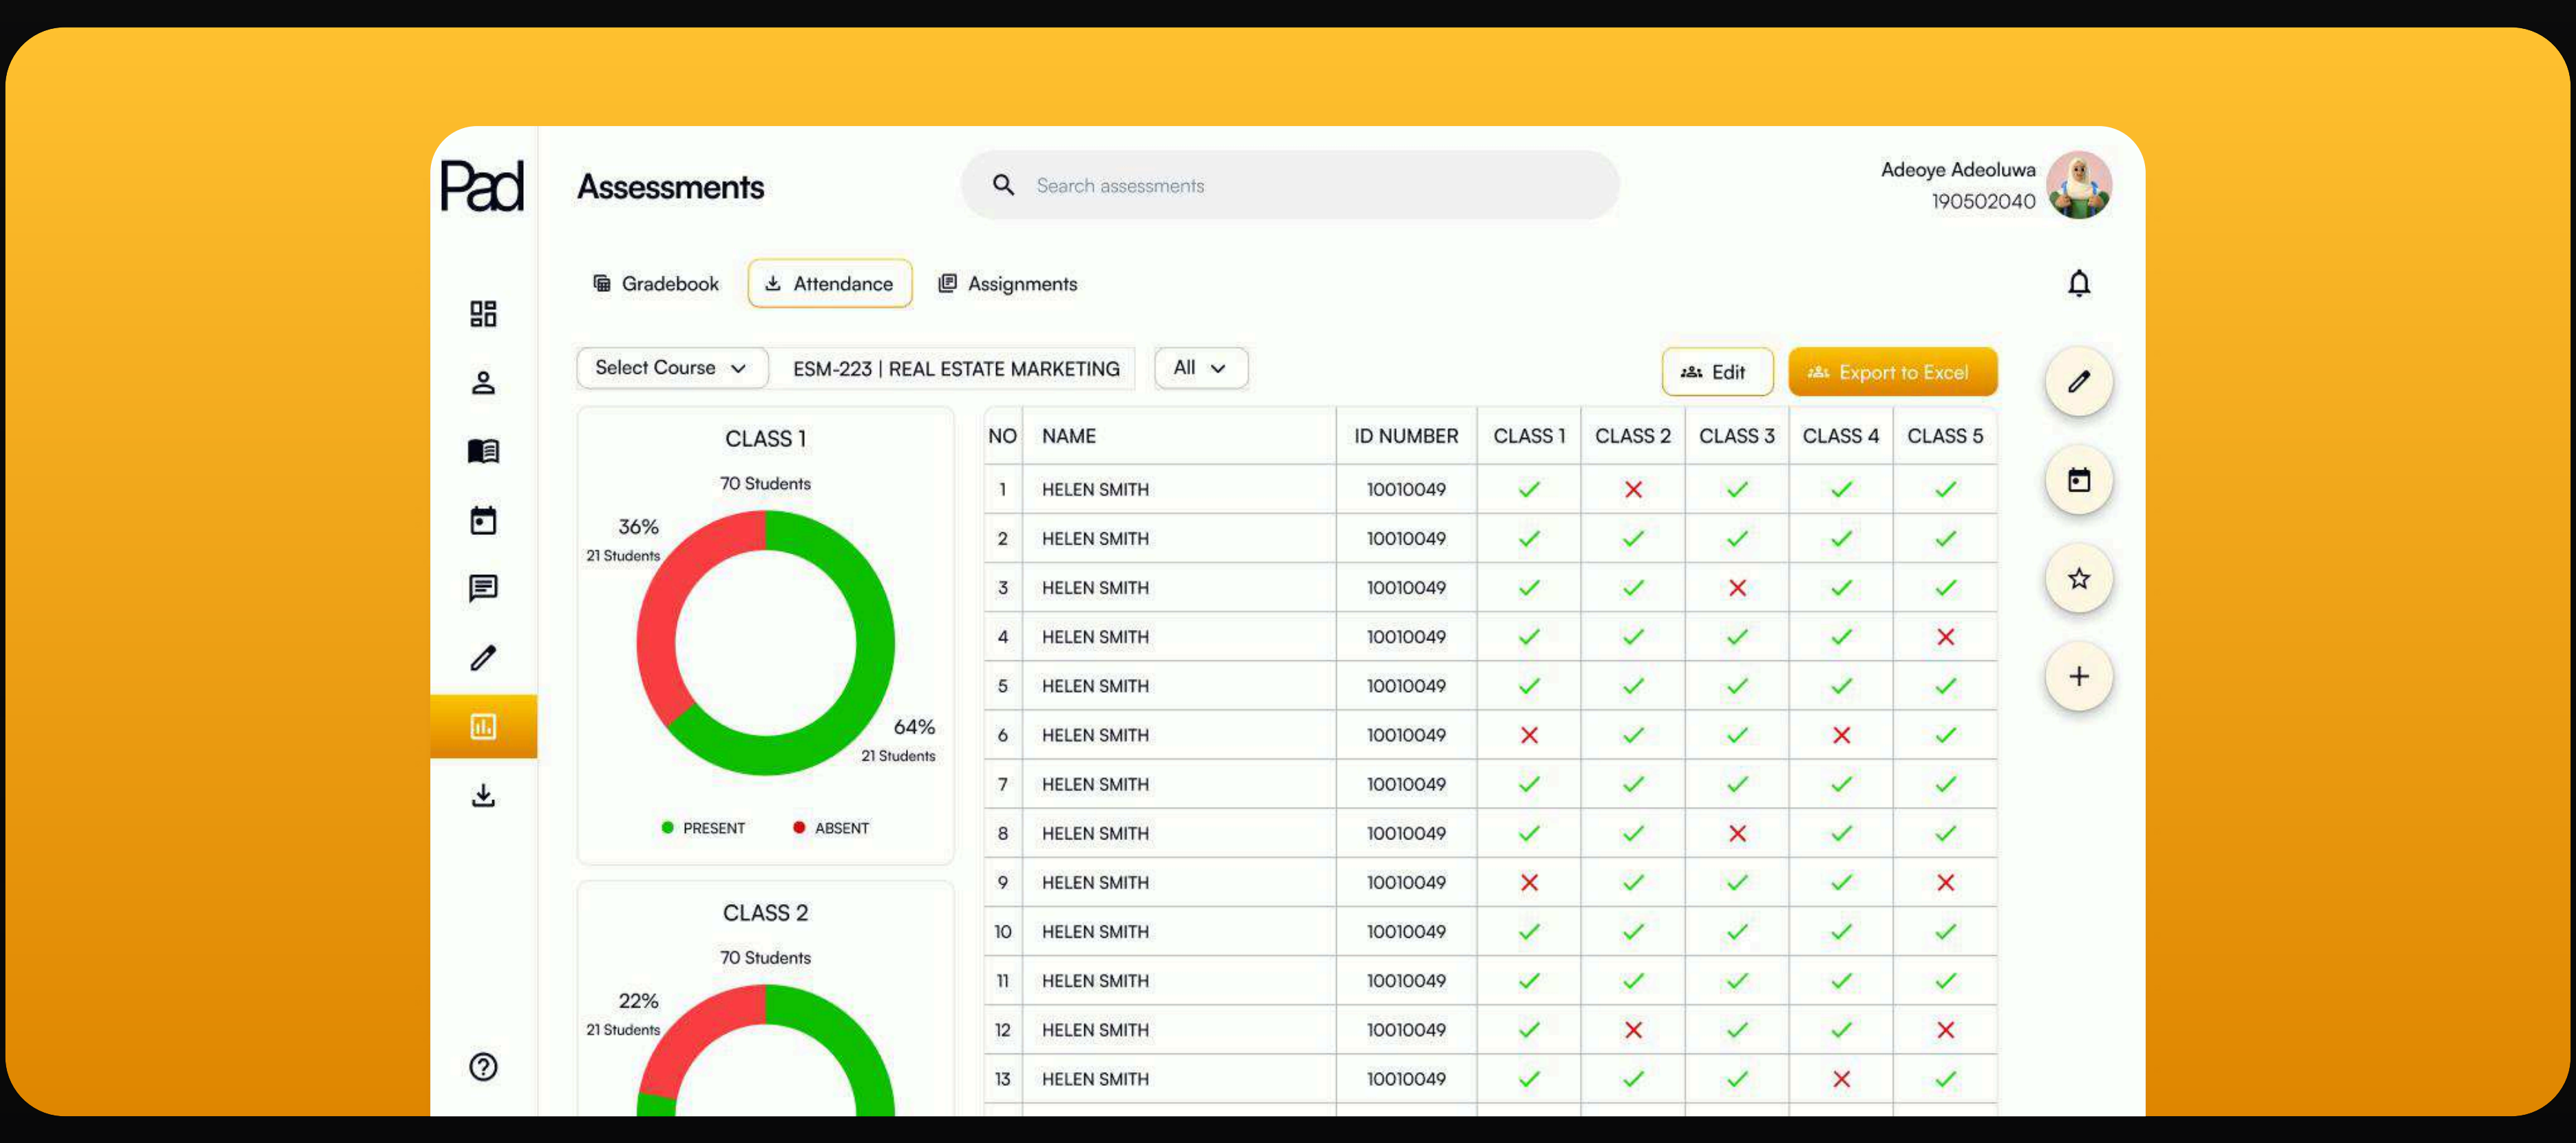
Year	2023



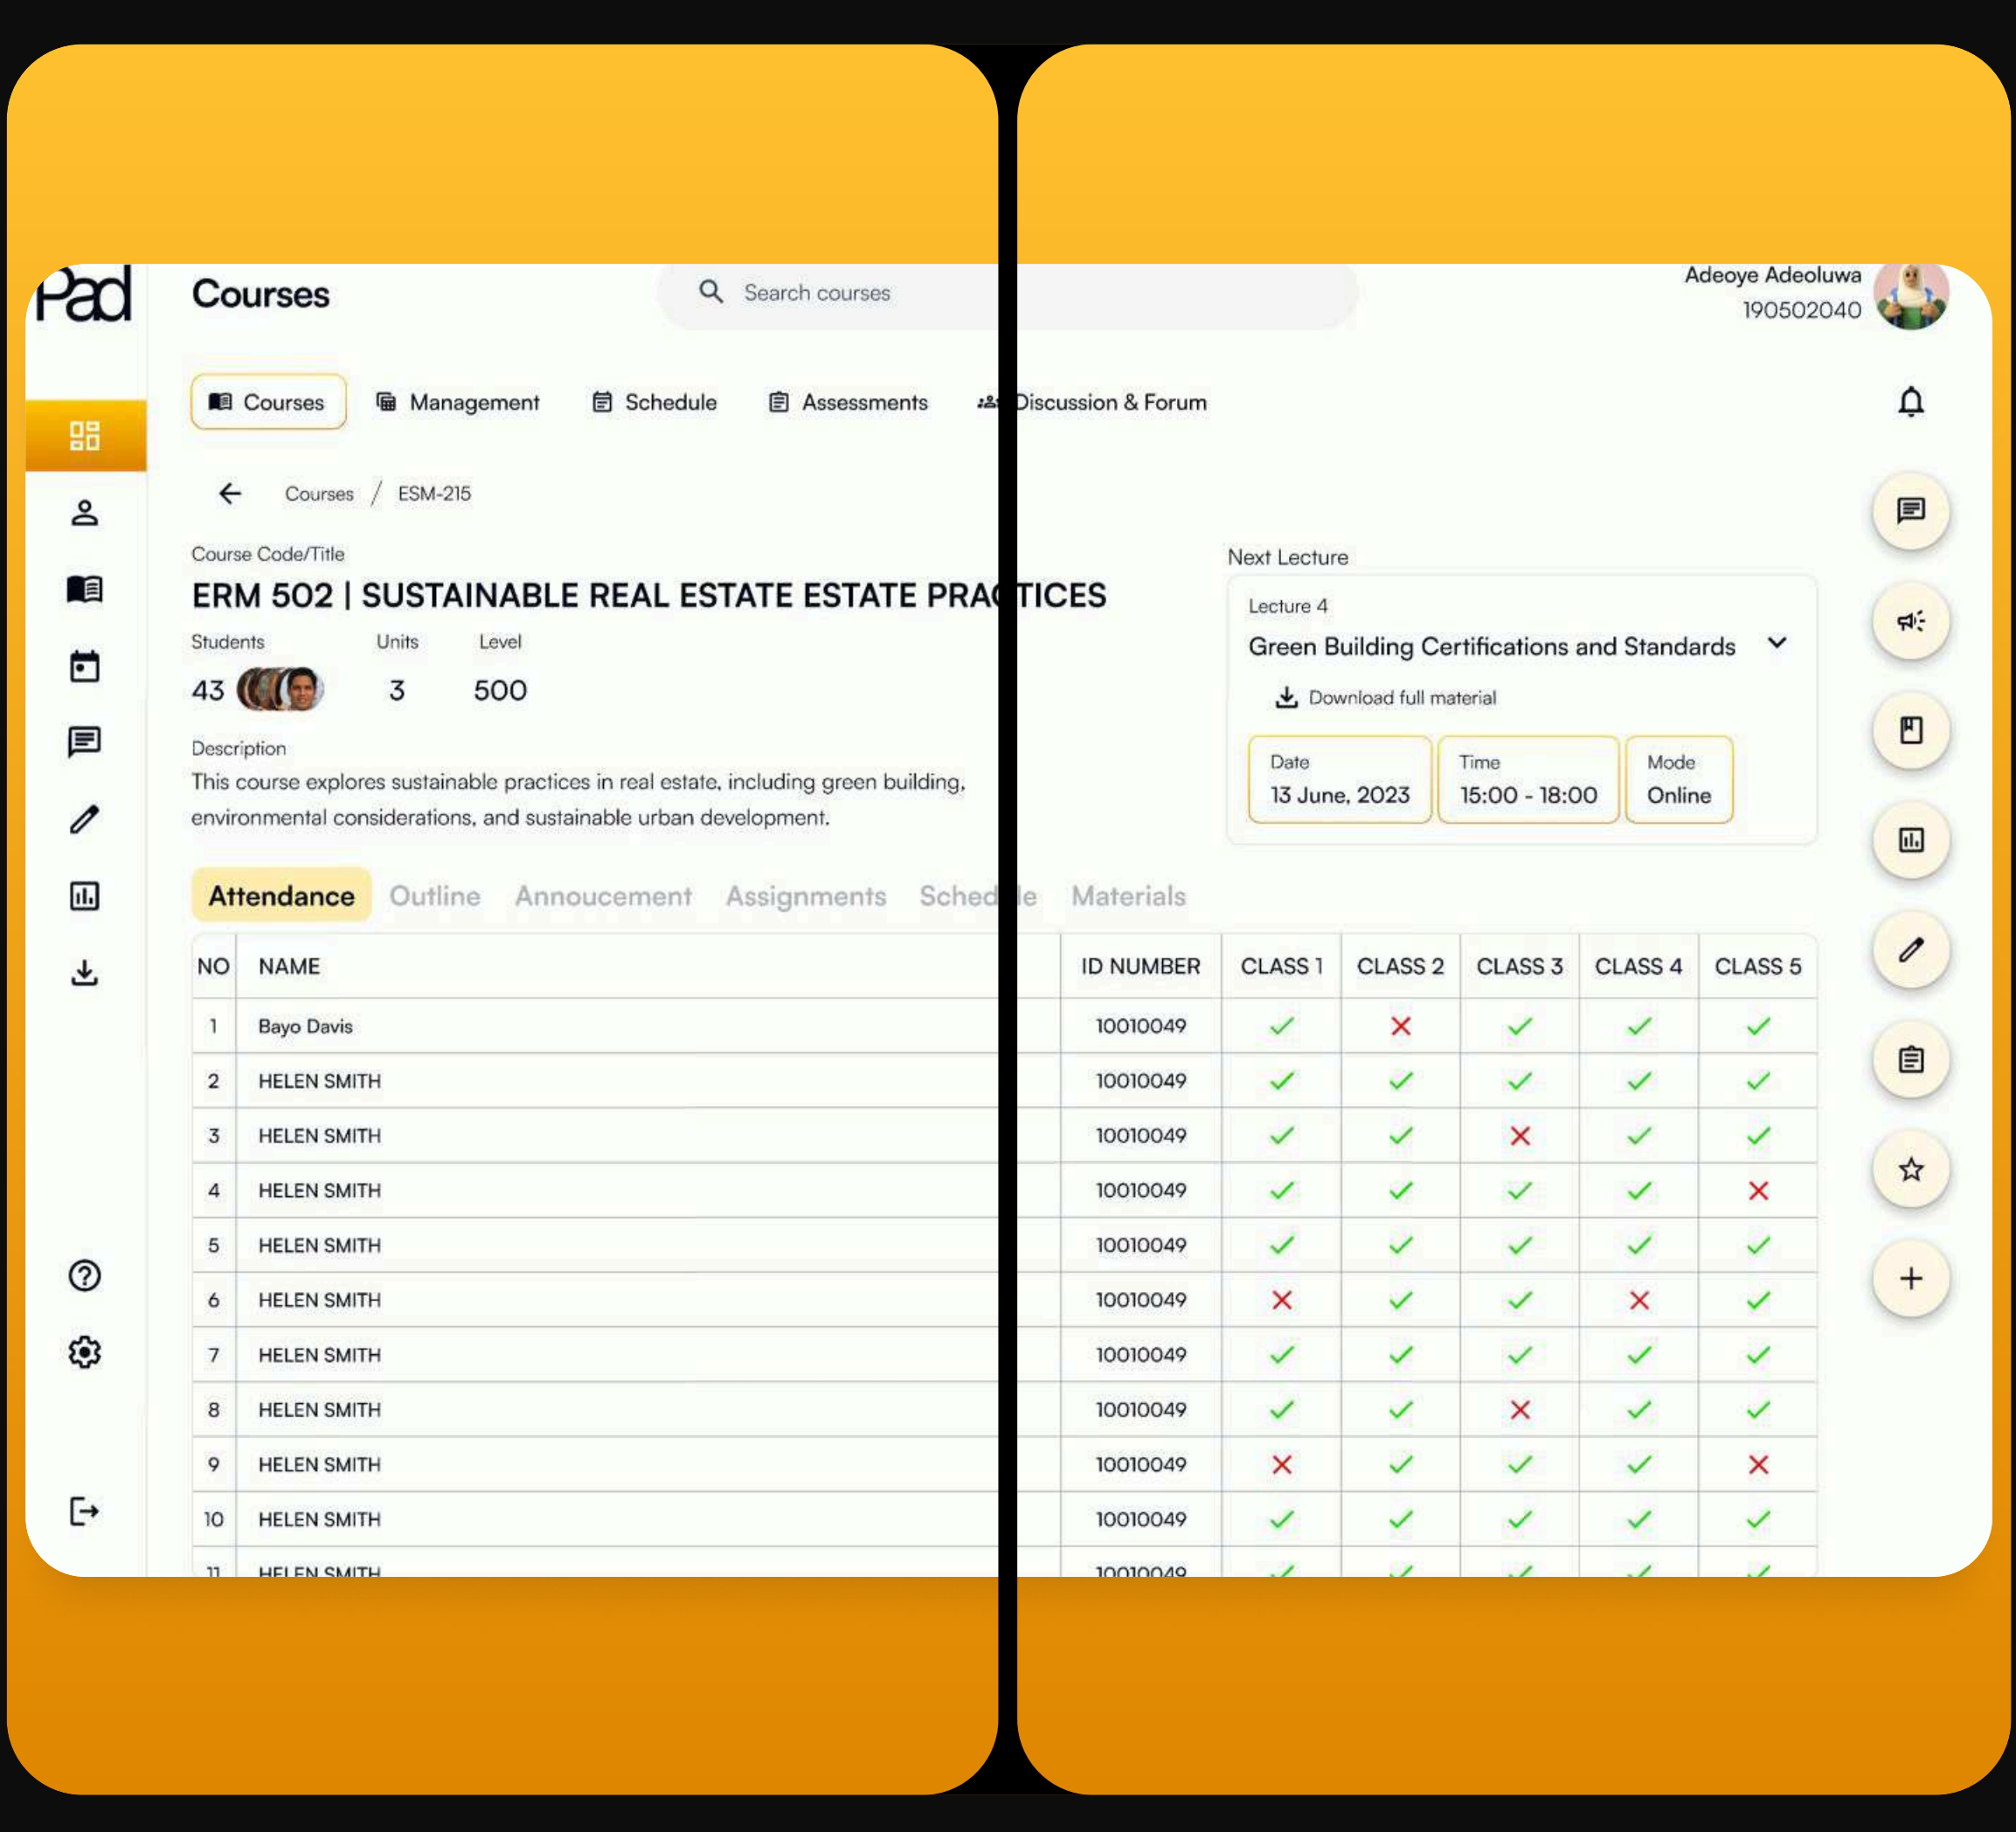
In 2023, I noticed a significant challenge in Nigerian universities: students lacked centralized access to study materials and past exam questions, while teachers struggled with content management and student engagement. This led to the creation of PAD, a learning management system designed to address these issues. PAD provides students with easy access to lecture notes, past questions, and communication with lecturers, while helping teachers manage resources and track student progress. This project not only shaped my design approach but also demonstrated the impact of effective digital solutions in education.

I designed the layout to be easy to understand at a glance — everything from course outlines to progress tracking is just right there.





No unnecessary features. PAD focuses on materials, course access, and staying organized — that's it. Because sometimes, less really is more.



The dashboard offers a clear, intuitive view. Course materials and progress are front and center.
